to Article 29 of the Regulation (EU)
No 305/2011 of the European
Parliament and of the Council of 9
March 2011

MEMBER OF EOTA

European Technical Assessment ETA-06/0106 of 2018/12/18

I General Part

Technical Assessment Body issuing the ETA and designated according to Article 29 of the Regulation (EU) No 305/2011: ETA-Danmark A/S

Trade name of the construction product:

Simpson Strong-Tie Angle Brackets
See type numbers in section II.1 of the ETA

Product family to which the above construction product belongs:

Three-dimensional nailing plate (timber-to-timber/timber-to-concrete angle bracket)

Manufacturer:

Simpson Strong-Tie Int. Ltd
For local branch addresses refer to www.strongtie.eu

Manufacturing plant:

SIMPSON STRONG-TIE Manufacturing facilities

This European Technical Assessment contains:

383 pages including 4 annexes which form an integral part of the document

This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of:

Guideline for European Technical Approval (ETAG) No. 015 Three Dimensional Nailing Plates, April 2013, used as European Assessment Document (EAD).

This version replaces:

The ETA with the same number issued on 2017-05-24

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

II SPECIAL CONDITIONS OF THE EUROPEAN TECHNICAL ASSESSMENT

1 Technical description of product and intended use

Technical description of the product

This ETA covers the following angle bracket types: ABR90, AB90, ABR105, AB105, ABR70, AB70, E20/3, E9/2.5, E9S/2.5, ABR9015, ABR9020, ABR100, AA60280, ABB40390, AE48, AE76, AE116, AG40312, AG40412, AG40314, AG40414, AH9035, AJ60416, AJ80416, AJ99416, ES, LS, TAZ, KNAG, ABR170, ABR220, AB6983, AB36125, BNV33, E5, AT1, E4, E6, E7, E8, E14, E17, E18, E19, ADR6090, ADR6035, ABAI, AG922, ABR10525, ABR7015, ACR, MAXIMUS, AT2, ABR865, ANP, A-bracket, ACFET, ABR98, ABRL98, AB105/513, ABR255, ADD45100, ABDW45100, ADR6090L, ABTR120/180/240, ACW155, AE90-RW, AH9055, CCWR, CCWR, ABGU360, SC2P-V100, SC2P-H180.

The angle brackets are one piece, non-welded, timber-to-timber angle brackets/timber to support (concrete, steel) angle brackets. They are connected to the timber elements/support by a range of nails, screws or bolts.

The Angle Brackets are made from pre-galvanized steel Grade S250GD + Z275 according to EN 10346 with tolerances according to EN 10143 except if another material is stated. Material, dimensions and nail positions are shown in Annex D and typical installations are shown in Annex B.

All the angle brackets can also be produced from stainless steel number 1.4401, 1.4404, 1.4521, 1.4301 or 1.4509 according to EN 10088-2 or a stainless steel with a minimum characteristic 0.2% yield stress of 240 MPa, a minimum 1.0% yield stress of 270 MPa and a minimum ultimate tensile strength of 530 MPa.

In the rest of this document, the steel types will be named as:

Steel ref. 1: S250GD + Z275

Steel ref. 2: Stainless Steel 1.4401, 1.4404, 1.4521

Steel ref. 3: Stainless Steel 1.4301, 1.4509

Steel ref. 4: SS Grade 33 + G90 (~Z275) or G185 (~Z600)

Steel ref. 5: S350GD + Z275

Steel ref. 6: S250GD + Z800 or ZM310 or similar coatings acc. to EN 10346, that has been tested to ISO 11997-1 Cyclic Corrosion Testing In artificial Atmosphere.

Steel ref. 7: Similar to steel ref. 6 but S350GD + Z800.

2 Specification of the intended use in accordance with the applicable EAD

The angle brackets are intended for use in making connections in load bearing structures, as a connection between two timber beams or a timber beam and a timber post or between a timber member and a concrete/steel member, where requirements for mechanical resistance and stability and safety in use in the sense of the Basic Works Requirements 1 and 4 of Regulation (EU) 305/2011 shall be fulfilled.

The connection may be with a single angle bracket or with an angle bracket on each side of the fastened timber member.

The static and kinematic behaviour of the timber members or the supports shall be as described in Annex C.

The wood members can be of solid timber, glued laminated timber and similar glued members, or wood-based structural members with a characteristic density from 290 kg/m³ to 420 kg/m³.

This requirement to the material of the wood members can be fulfilled by using the following materials:

- Solid timber classified to C14-C40 according to EN 338 / EN 14081
- Glued members of timber classified to C14-C40 according to EN 338 / EN 14081 when structural adhesives are used.
- Glued laminated timber classified to GL24c or better according to EN 1194 / EN 14080.
- Solid Wood Panels, SWP according to EN 13353.
- Laminated Veneer Lumber LVL according to EN 14374
- Laminated Strand Lumber, e.g. Parallam and Timber Strand
- Plywood according to EN 636
- Oriented Strand Board, OSB according to EN 300
- Cross Laminated Timber (CLT) acc. to EN 16351 or ETA

Annex D states the load-carrying capacities of the Angle Bracket connections for a characteristic density of 350 kg/m³.

For timber or wood-based material with a lower characteristic density than 350 kg/m³ the load-carrying capacities shall be reduced by the k_{dens} factor (see Annex C4-2)

The design of the connections shall be in accordance with Eurocode 5 or a similar national Timber Code. The wood members shall have a thickness, which is larger than the penetration depth of the nails into the members

The angle brackets may also be used for connections between a timber member and a member of concrete, steel or masonry.

The angle brackets are primarily for use in timber structures subject to the dry, internal conditions defined by service class 1 and 2 of Eurocode 5 and for connections subject to static or quasi-static loading.

The angle brackets can also be used in outdoor timber structures, service class 3, when a corrosion protection in accordance with Euro Code 5 is applied, or when stainless steel with similar or better characteristic yield and ultimate strength is employed (steel ref. 2, 3 and 6)

The scope of the hangers regarding resistance to corrosion shall be defined according to national provisions that apply at the installation site considering environmental conditions and in conjunction with the admissible service conditions according to EN 1995-1-1 and the admissible corrosivity category as described and defined in EN ISO 12944-2

The provisions made in this European Technical Assessment are based on an assumed intended working life of the angle brackets of 50 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Characteristics of product and assessment

| Characteristic | Assessment of characteristic |
|--|---|
| 3.1 Mechanical resistance and stability*) (BWR1) | |
| Characteristic load-carrying capacity | See Annex D |
| Stiffness | No performance determined |
| Ductility in cyclic testing | No performance determined |
| 3.2 Safety in case of fire (BWR2) | |
| Reaction to fire | The angle brackets are made from steel classified as Euroclass A1 in accordance with EN 13501-1 and EC decision 96/603/EC, amended by EC Decision 2000/605/EC |
| 3.3 Hygiene, health and the environment (BWR3) | |
| Influence on air quality | The product does not contain/release dangerous substances specified in TR 034, dated March 2012 |
| 3.7 Sustainable use of natural resources (BWR7) | Not relevant |
| 3.8 General aspects related to the performance of the product | The angle brackets have been assessed as having satisfactory durability and serviceability when used in timber structures using the timber species described in Eurocode 5 and subject to the dry internal conditions defined by service class 1, 2 and 3 |
| Identification | See Annex D |

*) See additional information in section 3.9 – 3.12.

3.9 Methods of verification

Safety principles and partial factors

The characteristic load-carrying capacities have been calculated considering different ratios between the partial factors for timber connections and steel cross sections.

According to clause 6.3.5 of EN 1990 (Eurocode – Basis of structural design) the characteristic resistance for structural members that comprise more than one material acting in association should be calculated as

$$R_d = \frac{1}{\gamma_{M,1}} R \left\{ \eta_1 X_{k,1}; \eta_i X_{k,i(i>1)} \frac{\gamma_{m,1}}{\gamma_{m,i}}; a_d \right\}$$

where $\gamma_{M,1}$ is the global partial factor for material 1 (in this case wood), $\gamma_{m,1}$ is the partial factor on the material and $\gamma_{m,i}$ are material partial factors for the other materials, i.e. the calculations are made with material parameters modified by multiplication by

$$k_{modi} = \gamma_{m,1} / \gamma_{m,i}$$

The characteristic load-carrying capacities have been calculated considering a ratio between the partial factor for timber connections and steel cross sections

$$k_{modi} = 1,18 \quad (EC5: k_{modi} = \frac{1,30}{1,10} = 1,18)$$

For $k_{modi} > 1,18$ the load-carrying capacities stated in Annex D are valid (on the safe side).

For $k_{modi} < 1,18$ the load-carrying capacities stated in Annex D have to be multiplied by a factor

$$f = \frac{k_{modi}}{1,18}$$

3.10 Mechanical resistance and stability

See annex D for characteristic load-carrying capacity in the different directions F_1 to F_5 .

The characteristic capacities of the angle brackets are determined by calculation assisted by testing as described in the EOTA Guideline 015 clause 5.1.2. They should be used for designs in accordance with Eurocode 5 or a similar national Timber Code.

No performance has been determined in relation to ductility of a joint under cyclic testing. The

contribution to the performance of structures in seismic zones, therefore, has not been assessed.

For some Angle Brackets, the performance has been determined in relation to the joint's stiffness properties - to be used for the analysis of the serviceability limit state.

Fasteners

The load bearing capacities of the brackets have been determined based on the use of Connector nails CNA or connector screws CSA in accordance with ETA-04/0013.

It is allowed to use other connector nails or connector screws in accordance with the standard EN 14592 with the same or better performance than the used 4,0 mm CNA Connector nails and still achieve the same load-bearing capacity of the connection.

For some brackets the load bearing capacities have been determined based on the use of bolts or powder actuated pins or wood screws – see Annex C3 for complete list.

For any other information about fasteners or characteristic capacity modification method for different fasteners, please see Annex C4-1.

The angle brackets can be mounted using different nail/screw patterns. The nail/screw patterns for each angle bracket and different connection type is described and shown in annex D.

Stainless steel

All the Angle Brackets can also be produced from stainless steel number 1.4401, 1.4404, 1.4521 (Steel ref. 2) and 1.4301, 1.4509 (Steel ref. 3) according to EN 10088-2 or a stainless steel with a minimum characteristic 0.2% yield stress of 240 MPa, a minimum 1.0% yield stress of 270 MPa and a minimum ultimate tensile strength of 530 MPa. The characteristic load carrying capacities can be considered as the same as those published in this document subject to the use of stainless CNA connector nails or CSA connector screws covered by the ETA-04/0013 or stainless threaded nails or screws in accordance to the standard EN 14592 respecting the rules given in the paragraph "fasteners" above.

3.11 Aspects related to the performance of the product

3.11.1 Corrosion protection in service class 1 and 2.

In accordance with ETAG 015 shall the angle bracket have a zinc coating weight of Z275. The steel employed is S250 GD with Z275 (Steel ref. 1 or 4) according to EN 10346.

3.11.2 Corrosion protection in service class 3.

In accordance with Eurocode 5 the Angle Brackets shall be produced from stainless steel (Steel ref. 2 or 3).

3.12 General aspects related to the use of the product

Simpson Strong-Tie angle brackets types ABR90, AB90, ABR105, AB105, ABR70, AB70, E20/3, E9/2.5, E9S/2.5, ABR9015, ABR9020, ABR100, AA60280, ABB40390, AE48, AE76, AE116, AG40312, AG40412, AG40314, AG40414, AH9035, AJ60416, AJ80416, AJ99416, ES, LS, TAZ, KNAG, ABR170, ABR220, AB6983, AB36125, BNV33, E5, AT1, E4, E6, E7, E8, E14, E17, E18, E19, ADR6090, ADR6035, ABAI, AG922, ABR10525, ABR7015, ACR, MAXIMUS, AT2, ABR865, ANP, A-bracket, ACFET, ABRL98, AB105/513, ABR255, ADD45100, ABDW45100, ADR6090L, ABTR120/180/240, ACW155, AE90-RW, AH9055, CCWL, CCWR, ABGU360, SC2P-V100, SC2P-H180 are manufactured in accordance with the provisions of this European Technical Assessment using the manufacturing processes as identified in the inspection of the plant by the notified inspection body and laid down in the technical documentation.

4 Assessment and verification of constancy of performance (AVCP)

4.1 AVCP system

According to the decision 97/638/EC of the European Commission¹, as amended, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) is 2+.

5 Technical details necessary for the implementation of the AVCP system, as foreseen in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at ETA-Danmark prior to CE marking.

Issued in Copenhagen on 2018-12-18 by

Thomas Bruun
Managing Director, ETA-Danmark

Annex A - Revision History

| Modifications and additions to the previous ETA-06/0106 valid from 2017-05-24 | |

Annex B - Typical Installation

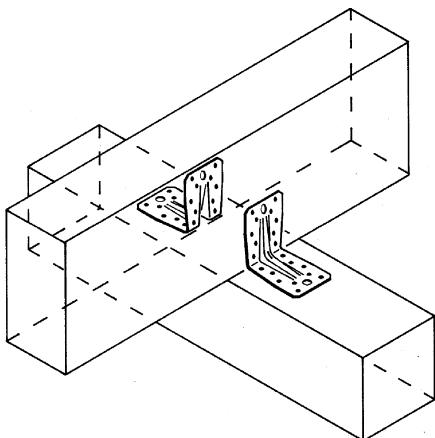

FIGURE B1 - BEAM TO BEAM CONNECTION

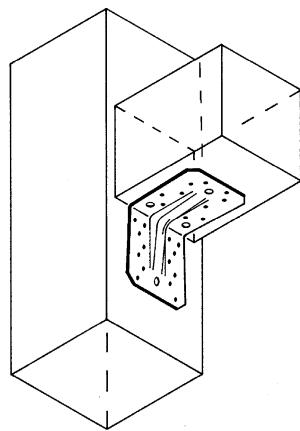

FIGURE B2 - BEAM TO COLUMN CONNECTION

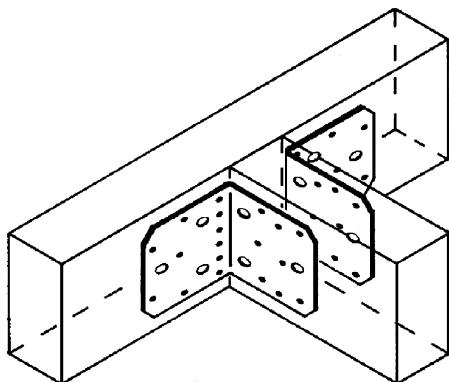

FIGURE B3 - TRIMMER CONNECTION

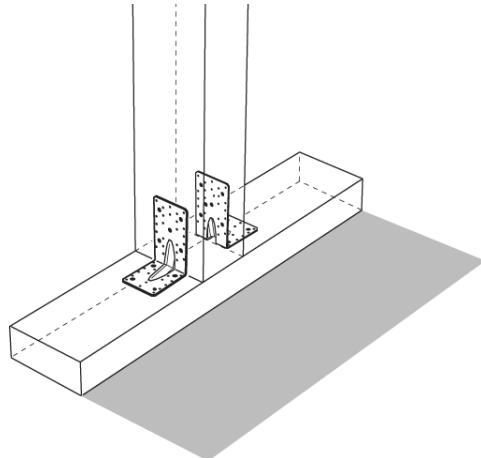

FIGURE B4 - POST TO BEAM CONNECTION

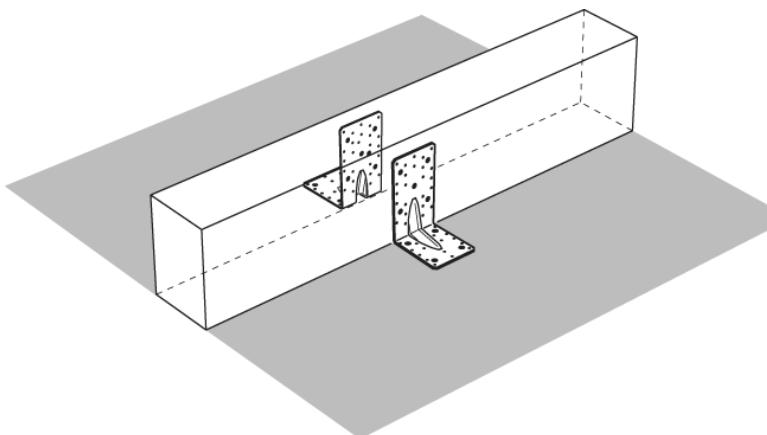

FIGURE B5 - BEAM TO RIGID SUPPORT WITH BOLTS

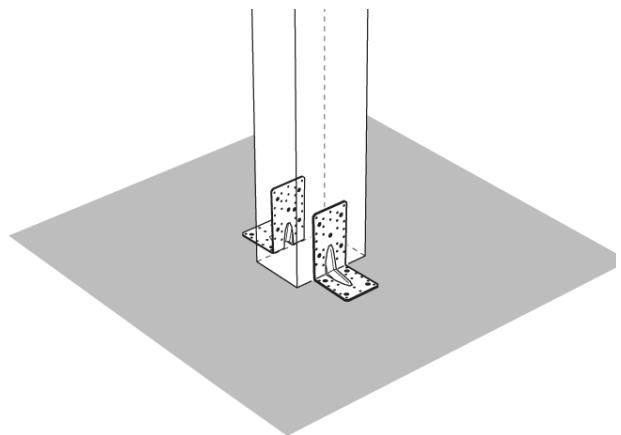

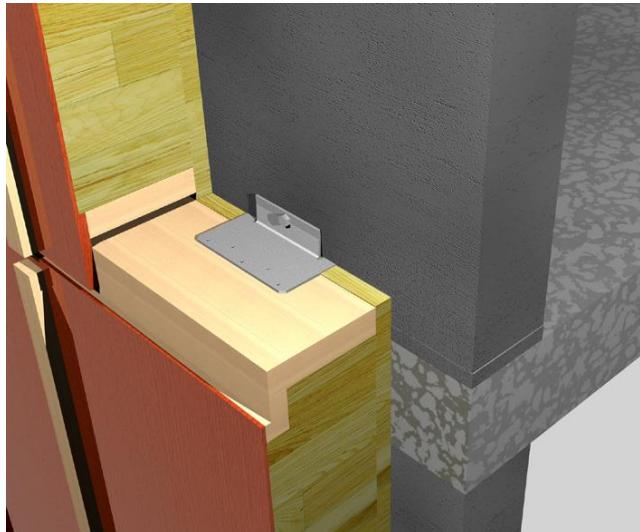

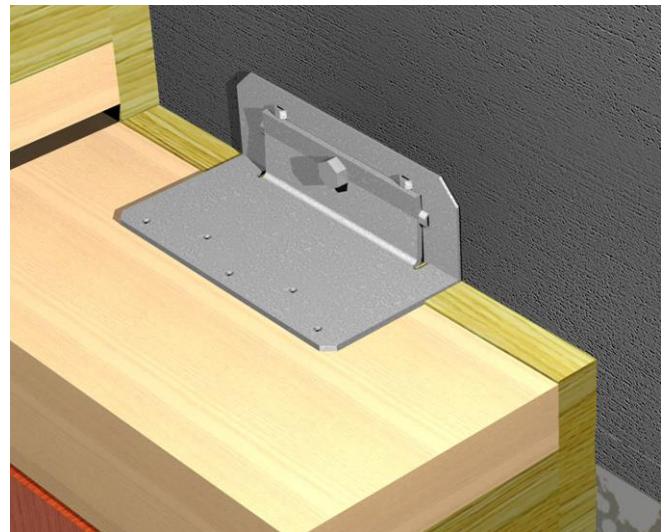

FIGURE B6 - POST TO RIGID SUPPORT WITH BOLTS

Typical installation of ACFET200 & ACFET200PP:

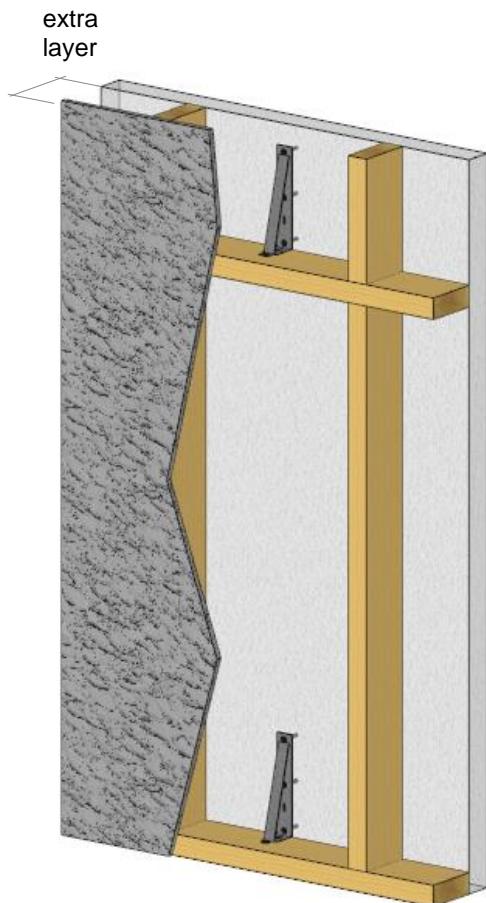

ACFET200 attached on a concrete wall

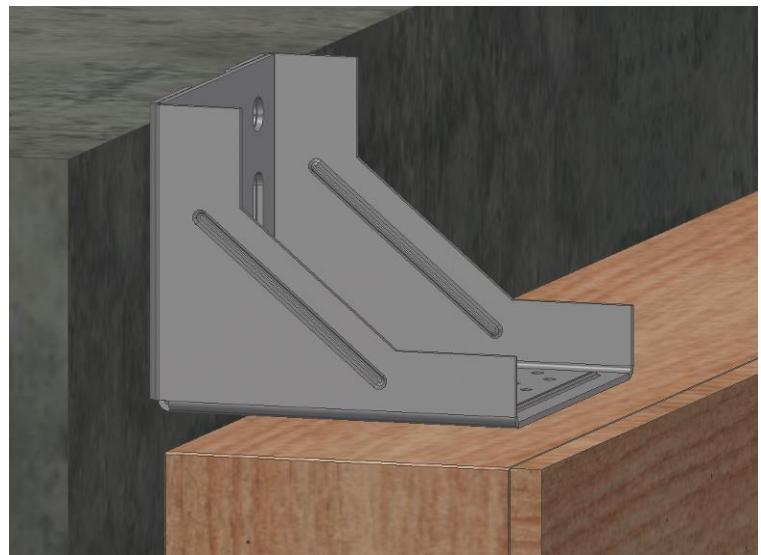

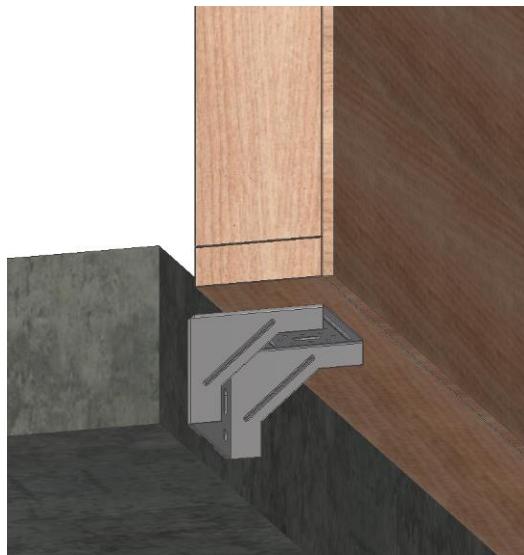

ACFET200PP attached on a Lightweight Aggregate Concrete (LAC) wall

Typical installation of ABTR:

Typical installation of ACW155:

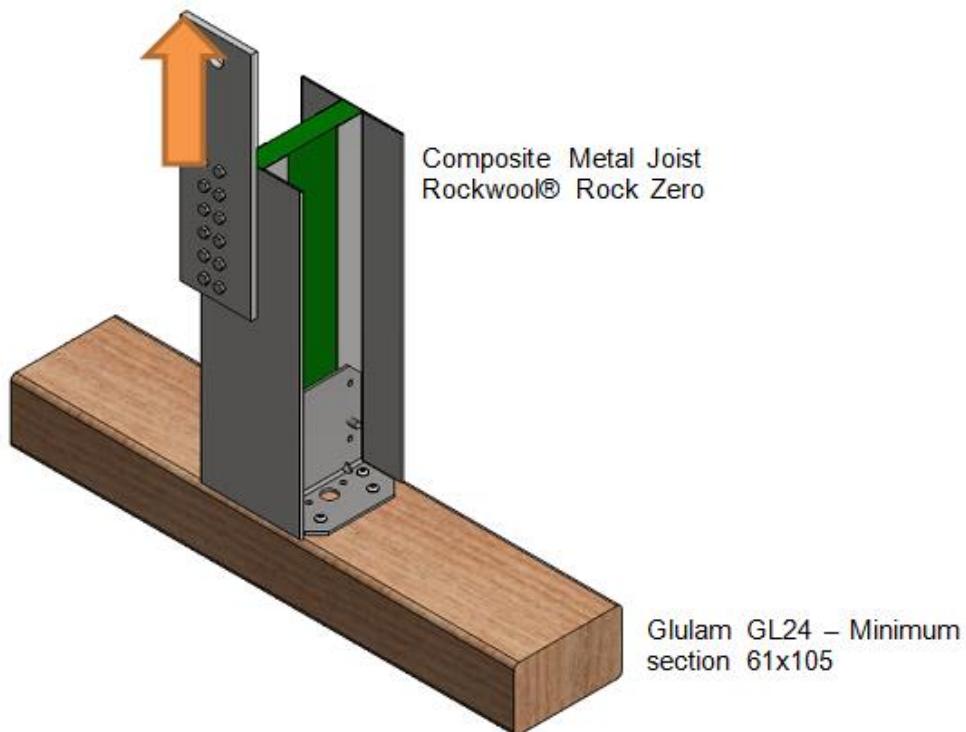

- **on front of concrete floor:**

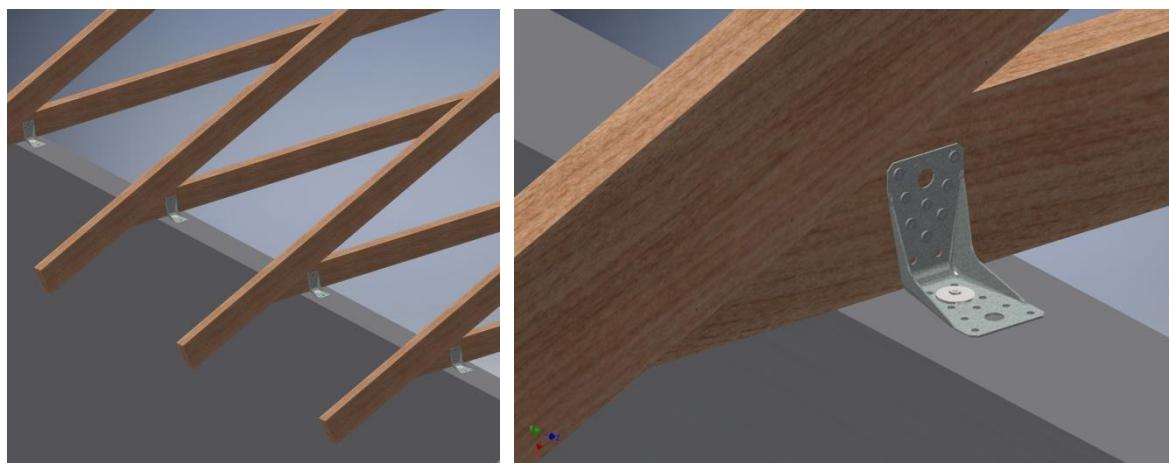

- **on top of concrete floor:**

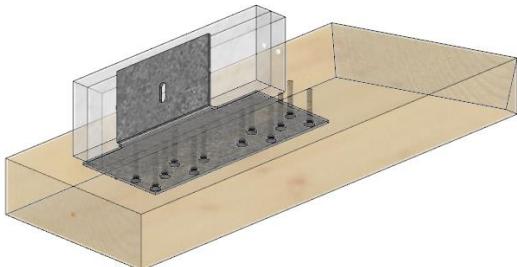

Typical installation of AE90-RW:

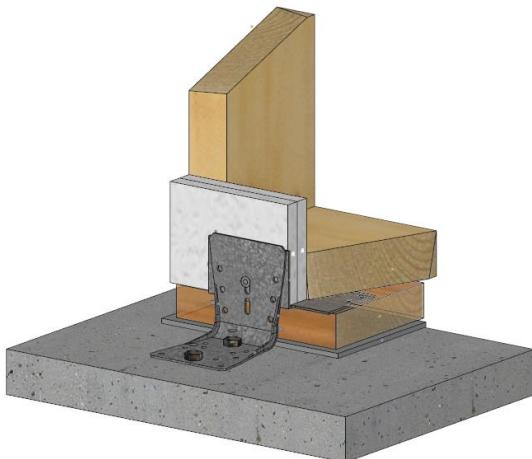

Typical installation of ABR9015 fire shot on concrete:

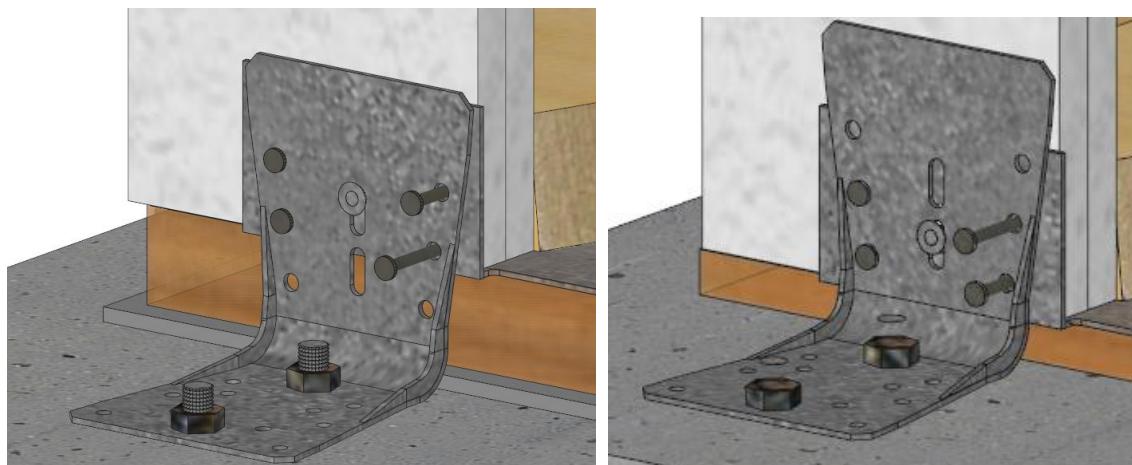

The typical installation of the SC2P is a connection of a wall plate to a concrete floor.

The SC2P-H180 is to fix with 12 CNA4,0x40 on the bottom side of the wall plate.

The SC2P-V100 is fixed with the Ø6mm screw through the oblong holes to the wall element, and with 1 (or 2) bolt(s) to the floor.

The both part elements are connected with 4 selfdrilling screws

Above are shown all the typical installation. Any other particular installation is described in the Annex D for the specific product.

Annex C - Basis of design

Annex C1 – Basis of Design

All the general basis of design are given here. These rules applied to all products listed in this ETA except if something else is stated in Annex D for a particular product.

Most of the capacities stated in the Annex D tables are **modified characteristic capacities** “ $R_{i,k} \times k_{mod}$ ” It means that the capacity given for a specific load duration category (P, L, M, S or I) already takes into account the k_{mod} factor. The design capacities are obtained according to the following formula.

$$R_d = \frac{R_k \times k_{mod}}{\gamma_M}$$

Some of the capacities stated in the Annex D tables are **characteristic capacities** R_k . Therefore, the design capacities are obtained according to the following formula:

$$R_d = \frac{R_k \times k_{mod}}{\gamma_M}$$

Combined forces

For practical purposes, the strength verification is always carried out for design forces and design capacities.

For all Angle Brackets included in this ETA, the following inequalities shall be fulfilled:

F_1 combined with F_2 or F_3 :

$$\left(\frac{F_{1,d}}{R_{1,d}} \right)^2 + \left(\frac{F_{2or3,d}}{R_{2or3,d}} \right)^2 \leq 1$$

F_1 combined with F_4 or F_5 :

$$\frac{F_{1,d}}{R_{1,d}} + \frac{F_{4or5,d}}{R_{4or5,d}} \leq 1$$

F_1 combined with F_2 or F_3 and F_4 or F_5 :

$$\sqrt{\left[\frac{F_{1,d}}{R_{1,d}} + \frac{F_{4or5,d}}{R_{4or5,d}} \right]^2 + \left[\frac{F_{2or3,d}}{R_{2or3,d}} \right]^2} \leq 1,0$$

Timber splitting

For forces acting perpendicular to the grain in the timber it must be checked that splitting will not occur in accordance with Eurocode 5 or a similar national Timber Code.

C2-1: Forces - Beam to beam connection, beam to support with bolts

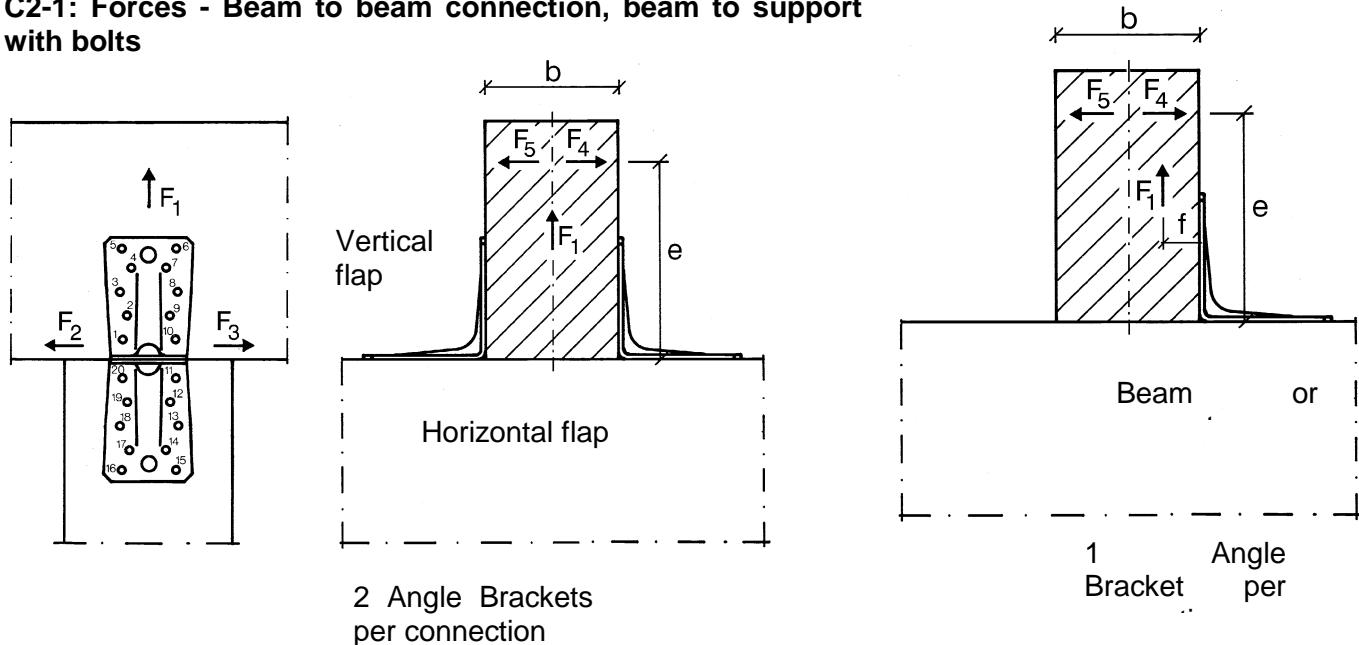

Figure C2-1: Beam to beam connection, beam to support with bolts

2 angle brackets per connection

The Angle Brackets must be placed at each side opposite to each other.

Acting forces

- F_1 Lifting force acting along the central axis of the joint.
- F_2 and F_3 Lateral force acting in the joint between the purlin and beam in the purlin direction.
- F_4 and F_5 Lateral force acting in the beam direction along the central axis of the joint but elevated e above the beam.

1 angle bracket per connection

Acting forces

- F_1 Lifting force acting in the central axis of the angle bracket but in a distance f from the vertical flap of the angle bracket.
If the purlin is prevented from rotation the load-carrying capacity will be half that of a connection with 2 angle brackets.
- F_2 and F_3 Lateral force acting in the joint between the purlin and the beam in the purlin direction, the purlin have to be prevented from twisting.
- F_4 Lateral force acting in the beam direction perpendicular to the vertical flap elevated e above the beam directed towards the angle brackets vertical flap.
- F_5 Lateral force acting in the beam direction perpendicular to the vertical flap elevated e above the beam directed away from the angle brackets vertical flap.

Wane on under the flap towards the purlin

For most of the Angle Brackets, wane under the flap towards the purlin is allowed provided it does not occur under the fasteners.

Under each table in Annex D is indicated whether wane is allowed or not allowed.

C2-2: Forces – Beam to column connection

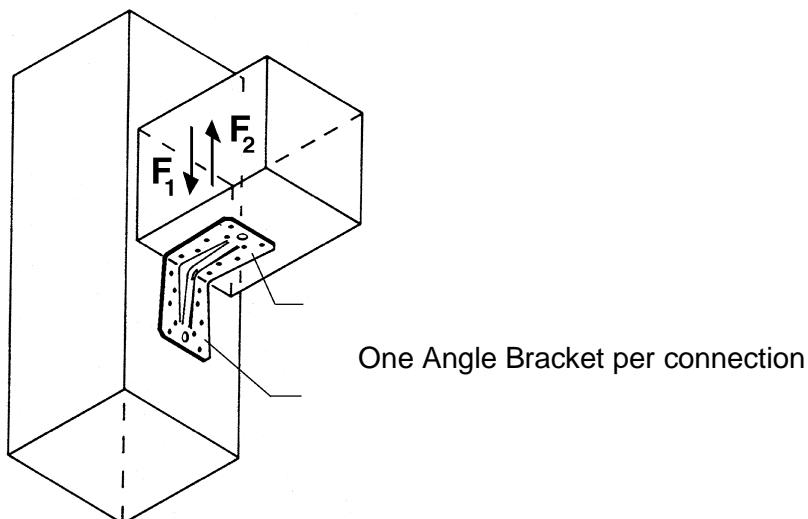

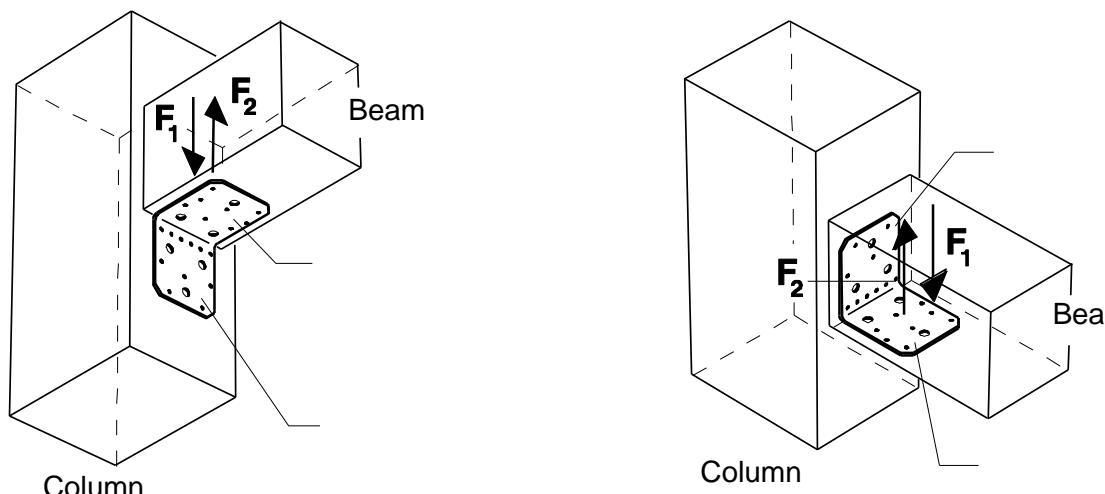

Figure C2-2-1: Beam to column connection – Angle Bracket with a rib

Flap turned downwards
Flap turned upwards
Figure C2-2-2: Beam to column connection – Angle bracket without a rib

1 angle bracket per connection

Acting forces

- | | |
|-------|--|
| F_1 | Downward force acting along the central axis of the Angle Bracket. |
| F_2 | Lifting force acting along the central axis of the Angle Bracket. |

C2-3: Forces – Post to beam connection, post to support with bolts

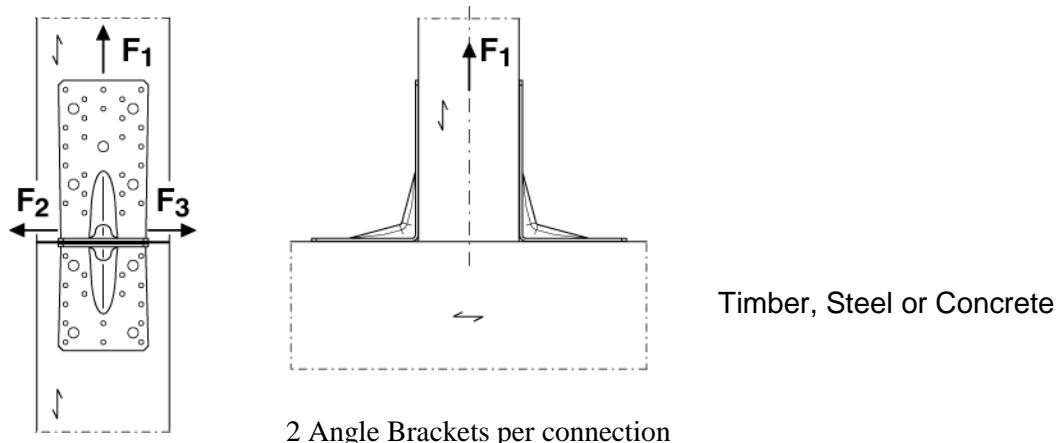

Figure C2-3: Post to beam connection, post to support with bolts

2 angle brackets per connection

The angle brackets must be placed at each side opposite to each other.

Acting forces

F_1 Lifting force acting along the central axis of the joint.

F_2 and F_3 Lateral force acting in the joint between the post and the beam parallel to the bend line in the Angle Bracket.

1 angle bracket per connection

The load-carrying capacities will be half of that of a connection with two Angle Brackets per connection, the post have to be prevented from twisting.

Wane

The timber shall have plane surfaces under the Angle Bracket, which means that wane may not occur under the angle bracket.

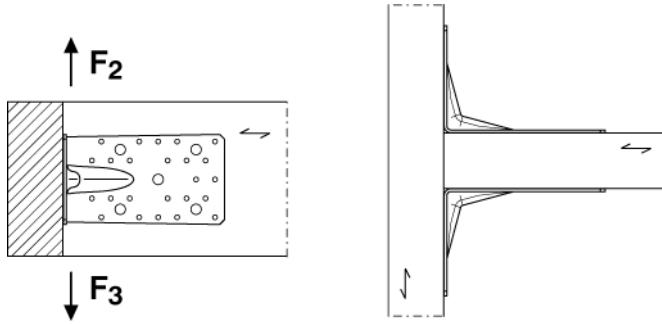

C2-4: Forces – Trimmer connection

Figure B3: Trimmer connection

2 angle brackets per connection

The angle brackets must be placed at each side opposite to each other.

Acting forces

F_2 and F_3 Lateral force parallel to the bend line in the Angle Bracket in the joint between the joist and the header.

1 angle bracket per connection

The load-carrying capacities will be half of that of a connection with 2 angle brackets per connection, the post has to be prevented from twisting.

Wane

The timber shall have plane surfaces under the Angle Bracket, which means that wane may not occur under the angle bracket.

C2-5 : Connection with bolts

Below the load-tables for connection with bolts are given factors.

It has to be checked, that the bolt has a capacity to absorb the resultant overlapping forces.

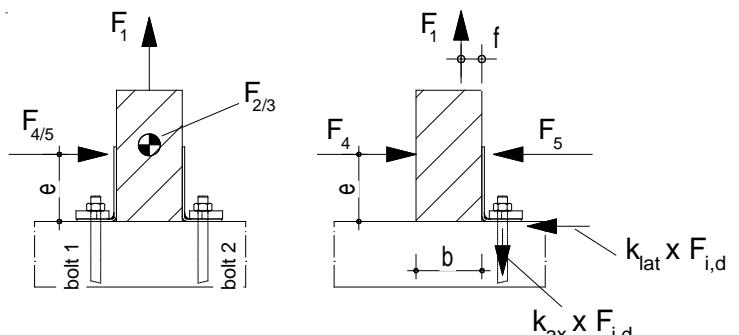

$$R_{\text{bolt ax/lat}} \geq \text{factor}_{\text{ax/lat}} \times \text{acting load.}$$

The factor k_{lat} is given to determine the shear load for the bolt

The factor k_{ax} is given to determine the axial load for the bolt

Each bolt shall have a capacity to sustain a lateral force of: $\geq k_{\text{lat}} \times F_{i,d}$
Each bolt shall have a capacity to sustain a axial force of: $\geq k_{\text{ax}} \times F_{i,d}$

Combinations of loads have to be considered.

| Timber Screws SS-H | 12 | 80 | Impreg + |

C4 – 1: Characteristic capacity modification method for different nails

CNA Connector nails and CSA Connector screws in accordance to ETA-04/0013

When the load bearing capacity of a bracket have been determined based on the use of Connector nails CNA 4,0x35, CNA4,0x40, CNA4,0x50 or CNA4,0x60 in accordance with ETA-04/0013 it is allowed to use longer 4,0 mm CNA Connector nails or Connector screws CSA5,0x35, CSA5,0x40, CSA 5,0x50 or Connector nails CNA4,2x35, CNA4,2x50, CNA4,2x60 in accordance with ETA-04/0013 with the same or better performance than the used 4,0 mm CNA Connector nails and still achieve the same load-bearing capacity of the connection.

When the load bearing capacity of a bracket have been determined based on the use of Connector screws it is always allowed to use a longer screw and the capacities will still be valid. If shorter Connector screws are used and no calculations are made a reduction factor equal to the ratio between the withdrawal capacity of the short screw and the withdrawal capacity of the long screw is applicable for all loadbearing capacities of the connection.

It is always allowed to interpolate between two sizes of nails or screws. For example the capacity of Connector nails CNA 4,0x50 in accordance with ETA-04/0013 can be calculated as the mean value of the capacity of the connection when Connector nails CNA4,0x40 and CNA4,0x60 are used:

To calculate the capacity with CNA4.0x50, the value of the capacity with CNA4.0x40 must be multiply by a factor k and must be limited to the value with CNA4.0x60.

$$\text{For } F_1 \text{ load direction on timber } k = R_{ax,CNA4.0x50} / R_{ax,CNA4.0x40}$$

$$\text{For } F_1 \text{ load direction on rigid support } k = R_{lat,CNA4.0x50} / R_{lat,CNA4.0x40}$$

$$\text{For } F_2 \text{ and } F_3 \text{ load direction on all support } k = R_{lat,CNA4.0x50} / R_{lat,CNA4.0x40}$$

$$\text{For } F_4 \text{ and } F_5 \text{ load direction on all support } k = R_{ax,CNA4.0x50} / R_{ax,CNA4.0x40}$$

Threaded nails in accordance to EN 14592

For all Angle Brackets the design models also allow the use of threaded nails in accordance to EN 14592 with a diameter in the range 4,0 – 4,2 mm and a minimum length of 35 mm, assuming a thick steel plate when calculating the lateral nail load-bearing capacity. If no calculations are made a reduction factor equal to the ratio between the characteristic withdrawal capacity of the actual used threaded nail and the characteristic withdrawal capacity of the corresponding Connector nail according to table B1 in ETA-04/0013 is applicable for all load bearing capacities of the connection.

Other fasteners

For some Angle Brackets, the load bearing capacities have been determined for a connection between a timber member and its support to a 6 mm steel member using PDPA-75 nails, which are powder actuated pins. The pins have been fastened through the existing holes in the Angle Brackets.

Some Angle Brackets gives the loadbearing capacity for a connection between a timber member and a 6 mm steel quality S355. For this connection, there is no proportionality for other steel grades or thicknesses.

Stainless steel

For the Angle Brackets produced from stainless steel number 1.4401, 1.4404, 1.4521 (Steel ref. 2) and 1.4301, 1.4509 (Steel ref. 3) according to EN 10088-2:2005 or a stainless steel with a minimum characteristic 0.2% yield stress of 240 MPa, a minimum 1.0% yield stress of 270 MPa and a minimum ultimate tensile strength of 530 MPa., the characteristic load carrying capacities can be considered as the same as those published in this document subject to the use of stainless CNA connector nails or CSA connector screws covered by the ETA-04/0013 or stainless threaded nails or screws in accordance to the standard EN 14592 respecting the rules given in the paragraph above for nails and screws according to ETA-04/0013 and EN14592.

C4 – 2: Characteristic capacity modification method for different timber types

Annex D states the load-carrying capacities of the Angle Bracket connections for a characteristic density of 350 kg/m³.

For timber or wood-based material with a lower characteristic density than 350 kg/m³ the load-carrying capacities shall be reduced by the k_{dens} factor:

$$k_{dens} = \left(\frac{\rho_k}{350} \right) \quad \text{Where } \rho_k \text{ is the characteristic density of the timber in kg/m}^3.$$

For interim value, e.g. distances, it's allowed to determine the values by interpolation if nothing else is named by the current table.

Annex D - Product definition and capacities

Annex D1 – ABR90

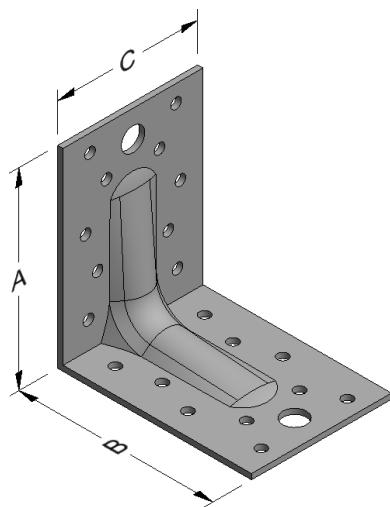

Product Name:

| Product Name | Material reference acc. to clause II-1 | Alternative product names |
|--------------|--|---|
| ABR90 | Steel ref. 1 | UK: E2/2.5/7090, France: E2/2.5/7090, Germany: 90 m/R |

| | | | I | 7,9 | 11,5 |

Wane may not occur under the angle brackets.

Table D2-5 Characteristic capacity timber beam to rigid support – 2 Angle Brackets

| 2 Angle Brackets AB90 per connection | | | Characteristic capacities per connection (kN) | | | | | | |
|--------------------------------------|---------------------|----------|---|--------|--------------------|--------|--------|---|--|
| Nailing pattern | Number of fasteners | | R _{1,k} | | R _{2/3,k} | | | R _{4/5,k} | |
| | Flange A | Flange B | 4,0x35 to 4,0x60 | 4,0x35 | 4,0x40 | 4,0x50 | 4,0x60 | 4,0x35 to 4,0x60 | |
| Nailing pattern 5 | 5 | 2 Bolts | 5,4/k _{mod} | 4,73 | 5,03 | 6,25 | 6,66 | max $\left\{ R_4^{(1)} + R_5^{(1)} \right. \right.$ min $\left\{ \frac{4,5}{k_{mod}}; \frac{R_1}{2} \times \frac{b}{e} \right\}$ ⁽¹⁾ for e | |

Connection with bolt

| 2 Angle Bracket AB90 per connection | | | |
|-------------------------------------|----------------|------------------|---|
| factor for: | F ₁ | F _{2/3} | F _{4/5,bolt1} F _{4/5,bolt2} |
| k _{ax} | 0,77 | - | 1,53xe/b 0,33 |
| k _{lat} | - | see description | - 1,00 |

For each bolt it's needed to check: R_{bolt,d,lateral} ≥ k_{lat} × F_{i,d}; R_{bolt,d,axial} ≥ k_{ax} × F_{i,d}; and also the combination.

The connections with bolts has to be checked as following:

connection with two AB90

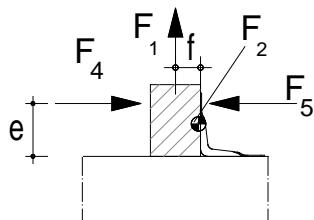

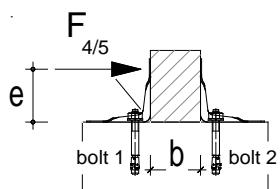

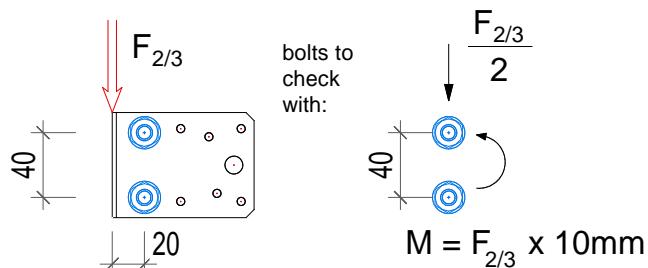

Table D2-6 Characteristic capacity timber beam to rigid support – 1 Angle Bracket

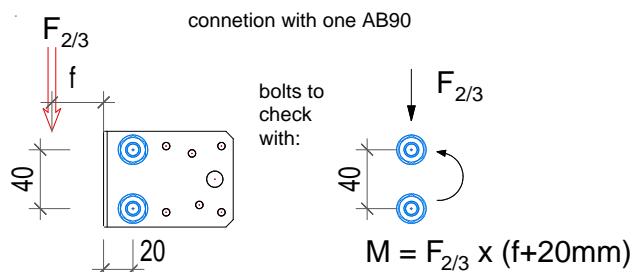

| 1 Angle Bracket AB90 per connection | | Characteristic capacities per connection (kN) | | | | | | | |
|-------------------------------------|--|---|--------------------------------|--|---|--------|--------|--------|-----|
| Nailing pattern | Number of fasteners Flange A Flange B | R _{1,k} | R _{4,k} | R _{2/3,k} | R _{5,k} | | | | |
| | | 4,0x35 to 4,0x60 | 4,0x35 to 4,0x60 | CNA connector nails 4,0x35 to 4,0x60 | 4,0x35 | 4,0x40 | 4,0x50 | 4,0x60 | |
| Nailing pattern 5 | 5 2 bolts | 19,9 / ((f + 16) x k _{mod}) | 45,2 / (e x k _{mod}) | Half of the values for a connection with 2 AB90, if the timber is prevented from rotation, otherwise R_2/3=0,0kN | X1= | | | | |
| | | | | | 123 | 148 | 197 | 246 | |
| | | | | | 63 | 75 | 100 | 125 | X2= |
| | | | | | $\min\left(\frac{X1}{e - 9,99mm}; \frac{X2}{85mm - e}; \frac{110}{e \times k_{mod}}\right)$ | | | | |

e is to insert in [mm]; $e \geq 10\text{mm}$
negativ values shall not be considered

Connection with bolt

| 1 Angle Bracket AB90 per connection | | | | |
|-------------------------------------|----------------|------------------|----------------|----------------|
| factor for: | F ₁ | F _{2/3} | F ₄ | F ₅ |
| k _{ax} | 1,53 | - | e/30 | e/26 |
| k _{lat} | - | see description | 1,00 | 1,00 |

For each bolt it's needed to check: $R_{\text{bolt},d,\text{lateral}} \geq k_{\text{lat}} \times F_{i,d}$; $R_{\text{bolt},d,\text{axial}} \geq k_{\text{ax}} \times F_{i,d}$; and also the combination

| | | | | f>8: <u>97</u> f | f>16: <u>155</u> f | | |

f are in mm.

Force direction F_1 : the two bolts in the first row, next to the bending line, shall have a capacity to sustain an axial force of $1,1 \times F_{1,d}$.

Force direction F_2 : the bolt group shall have a capacity to sustain the followings:

$F_{2,d}$; $M_{X,F2}=F_{2,d} \times 59\text{mm}$; $M_{Y,F2}=F_{2,d} \times 89\text{mm}$ see picture

The force F_2 must be applied to each E20/3. So for a connection with two E20/3, the bolt group for one angle bracket has to be calculated for $F_2/2$, same for force direction F_1 .

Wane may not occur under the angle brackets.

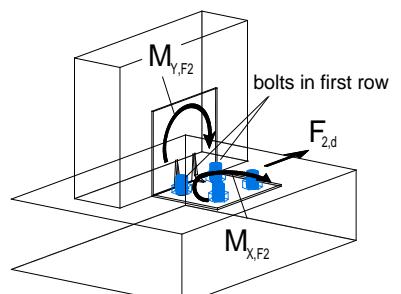

Table D7-7 Modified characteristic capacity timber column to rigid support – 2 Angle Brackets

| 1 Angle Bracket E20/3 per connection | | | Modified characteristic capacities per connection (kN) | | | | |
|--------------------------------------|---------------------|----------|--|-----------|----------------------------|-----------|-----------|
| | | | $R_{1,k} \times k_{mod}$ | | $R_{2/3,k} \times k_{mod}$ | | |
| Nailing pattern | Number of fasteners | | Load duration | CNA4,0x35 | CNA4,0x50 | CNA4,0x35 | CNA4,0x50 |
| | Flange A | Flange B | | | | | |
| Nailing pattern 6 | 13 | 4 bolts | P | 18,1 | 24,0 | 15,3 | 17,5 |
| | | | L | 21,1 | 28,0 | 17,8 | 20,4 |
| | | | M | 24,1 | 32,0 | 20,4 | 23,3 |
| | | | S | 27,2 | 36,0 | 22,9 | 26,2 |
| | | | I | 33,2 | 44,0 | 28,0 | 32,0 |

Wane may not occur under the angle bracket.

Table D7-8 Modified characteristic capacity timber to timber – trimmer connection

| 1 or 2 Angle Bracket(-s) E20/3 per connection | | | Modified characteristic capacity per connection (kN) | | | | |
|---|---------------------|----------|--|-----------|--------------------------------------|-----------|-----------|
| | | | 2 Angle Brackets E20/3 per connection | | 1 Angle Bracket E20/3 per connection | | |
| | | | $R_{2/3,k} \times k_{mod}$ | | $R_{2/3,k} \times k_{mod}$ | | |
| Nailing pattern | Number of fasteners | | Load duration | CNA4,0x35 | CNA4,0x50 | CNA4,0x35 | CNA4,0x50 |
| | Flange A | Flange B | | | | | |
| Nailing pattern 3 | 18 | 16 | P | 7,6 | 11,6 | 3,8 | 5,8 |
| | | | L | 8,9 | 13,5 | 4,4 | 6,7 |
| | | | M | 10,1 | 15,4 | 5,1 | 7,7 |
| | | | S | 11,4 | 17,4 | 5,7 | 8,7 |
| | | | I | 13,9 | 21,2 | 7,0 | 10,6 |

Wane may not occur under the angle brackets.

¹⁾ The capacities are based on the assumption that the bolts have a characteristic lateral capacity of 20 kN and a characteristic axial capacity of 22 kN. If one of the characteristic capacities of the chosen bolts is smaller, the capacity of the connection shall be reduced proportionally.

Table D7-9 Characteristic capacity CLT timber beam to CLT timber beam – 2 Angle Bracket E20/3 – Nailing pattern 6

| CLT to CLT connection | | | 2 angle brackets per connection | | | | |
|-----------------------|-------------------|-----------|---------------------------------|-------|------|--------------------------------------|------------------|
| Item | Nailing Pattern | Fasteners | | | | Characteristic capacities [kN] - CLT | |
| | | Header | | Joist | | R _{1,k} | R _{2,k} |
| | | Qty | Type | Qty | Type | SS-H Ø10x80 | SS-H Ø10x80 |
| E20/3 | Nailing pattern 7 | 4 | SS-H | 5 | SS-H | 29 | 26 |

CLT density was considered as C24 - $\rho_k = 350 \text{ kg/m}^3$

Table D7-10 E20/3 Slip modulus k_{ser}

| Configuration | Nailling pattern | R ₁ load direction | R ₂ load direction |
|-------------------------------|------------------|-------------------------------|-------------------------------|
| | | k _{ser} [kN/mm] | k _{ser} [kN/mm] |
| | | SS-H Ø10x80 | SS-H Ø10x80 |
| CLT to CLT (with SS-H screws) | 7 | 2,54 | 1,97 |

These slip modulus are given for 1 angle bracket. In case of 2 brackets, values can be obtained by multiplying the above by 2.

| | | | | | | | | 3,4/k _{mod} 0,7 |

| bolt factor for: | F ₁ | F _{2/3} | F ₄ | F ₅ |
|------------------|----------------|------------------|----------------|----------------|
| k _{ax} | 1 | 0,43 | - | 1,2 |
| k _{lat} | - | 1,1 | 1 | 1,2 |

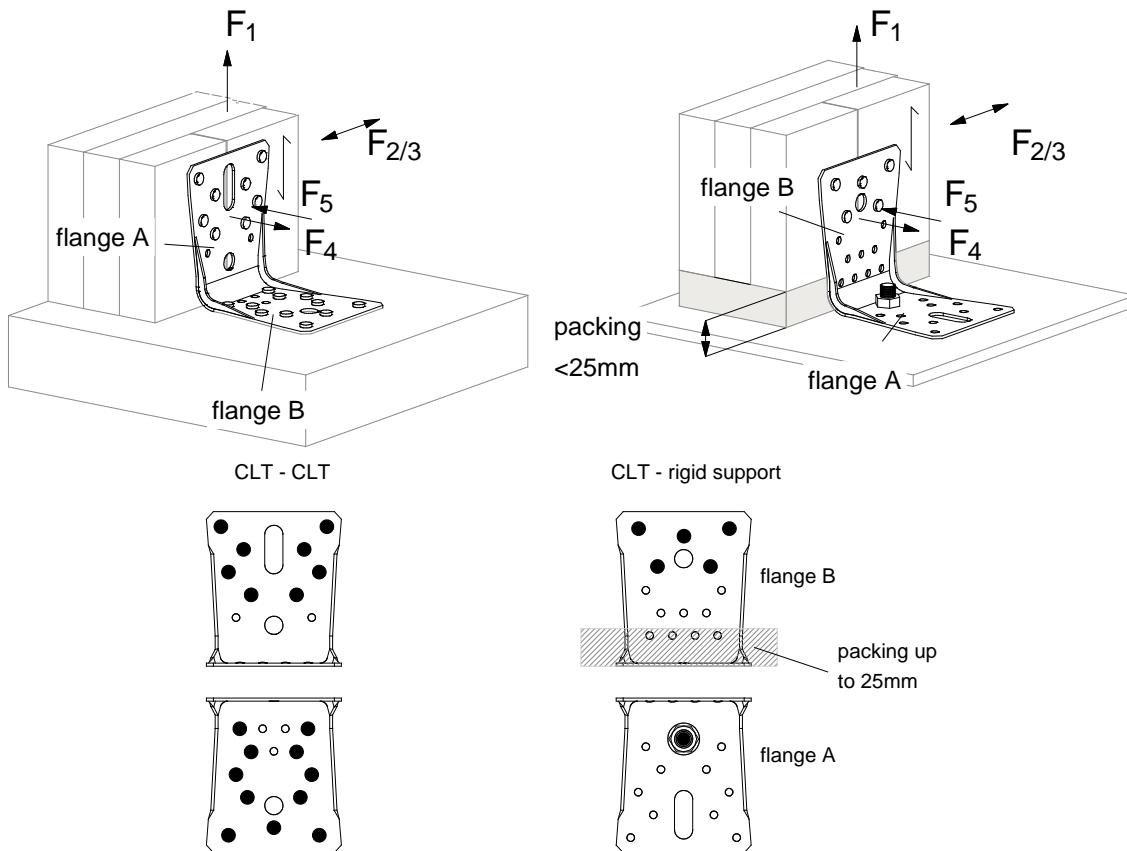

For connection to rigid support the packing below the CLT element shall not exceed 25mm.

The connected CLT element has to be free of any rotation.

Table D12-13 ABR100 Slip modulus k_{ser}

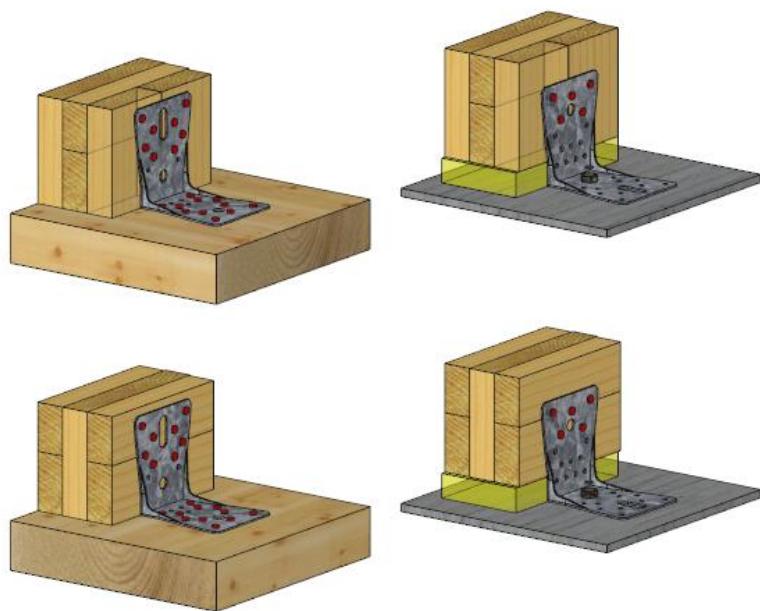

| Configuration | Nailing pattern | R_1 load direction | R_2 load direction |
|--|-----------------|----------------------|----------------------|
| | | k_{ser} [kN/mm] | k_{ser} [kN/mm] |
| Timber to timber (with SS-H screws Ø10x40) | 4 | 0,56 | 0,195 |
| Timber to rigid (with SS-H screws Ø10x40) | 5 | 0,685 | 0,22 |
| CLT to CLT (with CNA Ø4,0x50) | 6 | 2,6 | 0,9 |
| CLT to rigid support (with CNA Ø4,0x50) | 7 | 9,2 | 1,5 |

These slip modulus are given for 1 angle bracket. In case of 2 brackets, values can be obtained by multiplying the above by 2.

The direction of the outer layer may be also as shown below. (horizontal or vertical)

The edge distances (perpendicular and in direction of the grain) has to be considered and checked for application with solid timber.

e and b are in [mm]

When the purlin has a wane on the side towards the Angle Bracket the value in the grey square is valid.

| AE48 | connection with 2 angle brackets | | | |
|-------------------------|----------------------------------|---------------|------------------------|------------------------|
| factor: | for F_1 | for $F_{2/3}$ | for $F_{4/5}$, bolt 1 | for $F_{4/5}$, bolt 2 |
| k_{ax} square washer | 0,62 | - | 1,24 x e/(b+7) | - |
| k_{lat} square washer | - | 0,50 | - | 1,00 |
| k_{ax} round washer | 0,66 | - | 1,33 x e/(b+7) | - |
| k_{lat} round washer | - | 0,50 | - | 1,00 |

e and b are in [mm]

For each bolt (bolt group) it's needed to check:

 $R_{bolt,d,lateral} \geq k_{lat} \times F_{i,d}$; $R_{bolt,d,axial} \geq k_{ax} \times F_{i,d}$; and also the combination

Square washer = US40/40/10G or US40/50/10G

Round washer = standard washer of the anchor bolt. For anchor Ø12 the washer diameter is Ø24

Table D15-4 Modified characteristic capacity timber beam to rigid support – 1 Angle Bracket

Nailing pattern 8

Nailing pattern 9

Nailing pattern 10

Square washer (US40/40/10G or US40/50/10G) can be replaced by standard washer of the bolts (bolt Ø12 – washer Ø24). In this case, the value of k_{lat} and k_{ax} must be adapted (see tables below D17-4 and D17-5).

| Nailing pattern | No of fasteners | | Description |
|-----------------|-----------------|----------|---|
| | Flange A | Flange B | |
| 1 | 12 | 7 | Nailing with force F1 , F2, F3, F4 and F5 |
| 2 | 14 | 7 | Max. nailing with force F2 and F3 |
| 3 | 8 | 7 | Min. nailing with force F1 , F2, F3, F4 and F5 |
| 4 | 9 | 7 | Min. nailing with force F2, F3 |
| 5 | 6 | 3 | Specific nailing for timber beam to rafter connection |
| 6 | 12 | 7 | Nailing with force F1, F2 and F3 |
| 7 | 12 | 2 x M12 | Max. nailing with force F1 , F2, F3 F4 and F5 |
| 8 | 14 | 2 x M12 | Max. nailing with force F2 and F3 |
| 9 | 12 | 2 x M12 | Nailing with force F1, F2 and F3 |
| 10 | 3 | 3 | Beam to beam with large connector screws type SS-H |

| | 3 | 2 x 8 | 2 x 7 | 2,1 | 3,4 | 2,7 | 3,7 |
| 1 x AE116 per Connection | 7 | 12 | 2 x M12 | 5,2 | 5,8 | 4,8 | 5,0 |
| | 1 | 12 | 7 | 1,1 | 1,7 | 1,6 | 2,3 |
| | 3 | 8 | 7 | 1,1 | 1,7 | 1,4 | 1,9 |

Combined symmetrical and single sided forces

For a combination of symmetrical and single sided load, the load carrying capacity is found from the following criteria:

$$\frac{F_{6,symmetrich}}{R_{6,symmetrich,d}} + \frac{F_{6,singlesided}}{R_{6,singlesided,d}} \leq 1$$

Combined symmetrical and single sided and tension force

For a combination of symmetrical, single sided force and tension in a rafter, the load carrying capacity is found from the following criteria:

$$\frac{F_{6,symmetrich}}{R_{6,symmetrich,d}} + \frac{F_{6,singlesided}}{R_{6,singlesided,d}} + \frac{F_{tension} \cdot \cos(\alpha)}{R_{tension,d}} \leq 1$$

Where: $R_{tension} = 13 \cdot c$ kN, where c is the load duration factor.

Compression

The compressive force in the rafter is decomposed into a vertical force, $F_{compression} \cdot \sin(\alpha)$ and a horizontal force $F_{compression} \cdot \cos(\alpha)$.

The compressive force on the side of the ridge beam consist of contributions from both the rafter loaded in tension, $F_{tension} \cdot \cos(\alpha)$ and from the rafter loaded in compression $F_{compression} \cdot \cos(\alpha)$. The ridge beam must be checked for the compressive force acting perpendicular to the grain.

The maximum force considering the capacity perpendicular to the grain is found from the following expression:

$$R_{c,90,k} = f_{c,90,k} \cdot \left(2,38 - \frac{b_{rafter}}{250} \right) \cdot \left(1 + \frac{b_{ridgebeam}}{6 \cdot b_{rafter}} \right) \cdot b_{rafter} \cdot h_{contact}$$

Where:

$f_{c,90,k}$ = characteristic compression strength perpendicular to the grain of ridge beam

b_{rafter} = width of rafter [mm]

$b_{ridgebeam}$ = width of ridge beam [mm]

$h_{contact}$ = height of contact area between rafter and ridge beam, see table above

The capacity of the connection is verified from the following criteria:

$$(F_{compression} + F_{tension}) \cdot \cos(\alpha) \leq R_{c,90,k}$$

Table D17-7 Characteristic capacity CLT timber beam to CLT timber beam – 2 Angle Bracket AE116 – Nailing pattern 10

| CLT to CLT connection | | | 2 angle brackets per connection | | | | |
|-----------------------|--------------------|-----------|---------------------------------|-------|------|--------------------------------------|------------------|
| Item | Nailing Pattern | Fasteners | | | | Characteristic capacities [kN] - CLT | |
| | | Header | | Joist | | R _{1,k} | R _{2,k} |
| | | Qty | Type | Qty | Type | SS-H Ø12x80 | SS-H Ø12x80 |
| AE116 | Nailing pattern 10 | 3 | SS-H | 3 | SS-H | 33 | 29,5 |

CLT density was considered as C24 - $\rho_k = 350 \text{ kg/m}^3$

Table D17-8 AE116 Slip modulus K_{ser}

| Configuration | Nailling pattern | R ₁ load direction | R ₂ load direction |
|-------------------------------|------------------|-------------------------------|-------------------------------|
| | | k _{ser} [kN/mm] | k _{ser} [kN/mm] |
| | | SS-H Ø12x80 | SS-H Ø12x80 |
| CLT to CLT (with SS-H screws) | 10 | 1,88 | 2,36 |

These slip modulus are given for 1 angle bracket. In case of 2 brackets, values can be obtained by multiplying the above by 2.

It is possible to make connections with a knight bracket and one or two joist anchors.

Typical connection
with a knight bracket
and a joist anchor

Dimensioned drawings of the joist
anchors and nail patterns (full nailing)

One knight bracket per connection

Acting forces

- F₁ Lifting force acting in the central axis of the angle bracket but in a distance f from the vertical flange of the knight bracket
- F₂ Lateral force acting in the beam direction perpendicular to the vertical flange elevated e above the beam directed towards the knight brackets vertical flange

One knight bracket and one or two joist anchors per connection

Acting forces

- F₁ Lifting force acting in the central axis of the knight bracket
- F₂ Lateral force acting in the beam direction perpendicular to the vertical flange elevated e above the beam directed towards the knight brackets vertical flange

Wane

Wane is not allowed under the knight bracket.

Table D23-1 Modified characteristic capacity timber beam to timber beam – 1 Knight Bracket Load duration S

| 1 Knight Bracket KNAG | | | | | Modified characteristic capacity per connection (kN) | | | |
|-----------------------|-------------------|---------------------|----------------|---------------|--|--------------------------------|------------------------------|--|

ABR220

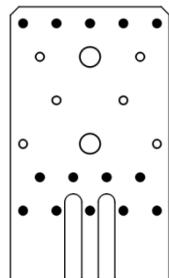

Nailing pattern:

For a combination of different force directions, it's to use the nail pattern with the most nails.

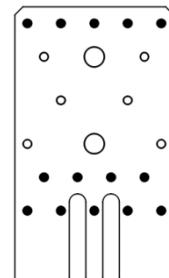

Nailing pattern 1

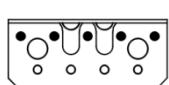

Nailing pattern 2

Nailing pattern 3

Flange A:

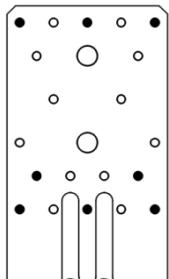

Flange B:

ABR170 and ABR220
Beam/column to beam
For force F_1

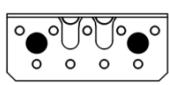

ABR170 and ABR220
Beam/column to beam
For force $F_{2/3}$

ABR170 and ABR220
Beam/column to beam
For force $F_{4/5}$

Nailing pattern 4

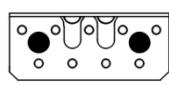

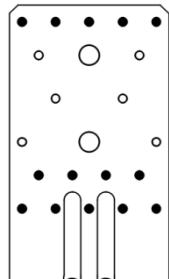

Flange A:

ABR170 and ABR220
Beam/column to rigid
For force F_1

Nailing pattern 5

ABR170 and ABR220
Beam/column to rigid
For force $F_{2/3}$ and $F_{4/5}$

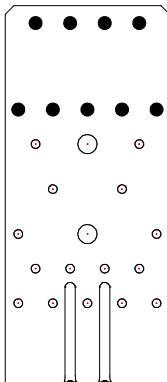

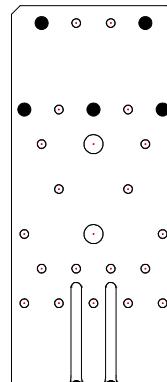

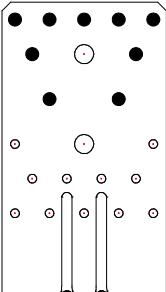

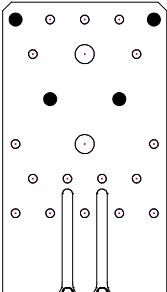

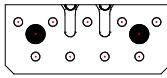

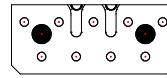

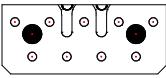

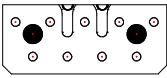

| | Nailing pattern 6 | Nailing pattern 7 | Nailing pattern 8 | Nailing pattern 9 |

¹⁾ capacity for a connection, without rotation of purlin

Table D27-3 Characteristic capacity timber beam/column to rigid – 2 Angle Brackets

| 2 Angle Brackets ABR170 or ABR220 per connection | | | Characteristic capacity per connection (kN) | | | | | |
|--|---------------------|----------|---|---|--|---|-------------|--|
| Nailing pattern | Number of fasteners | | $R_{1,k}$ | CNA Connector nail | | | $R_{4/5,k}$ | |
| | Flange A | Flange B | | 4,0x40 | 4,0x50 | 4,0x60 | | |
| Nailing pattern 4 | 8 | 2 Bolts | $R_{1,k}$ | $\min \left\{ \frac{33,0}{25,2}, \frac{25,2}{k_{mod}} \right\}$ | $\min \left\{ \frac{39,8}{25,2}, \frac{25,2}{k_{mod}} \right\}$ | $\frac{25,2}{k_{mod}}$ | | |
| Nailing pattern 5 | 14 | 2 Bolts | $R_{2/3,k}$ | 19,71 | $\min \left\{ \frac{23,8}{24,6}, \frac{24,6}{k_{mod}} \right\}$ | $\min \left\{ \frac{25,4}{24,6}, \frac{24,6}{k_{mod}} \right\}$ | | |
| Nailing pattern 5 | 14 | 2 Bolts | $R_{4/5,k}$ | the minimum of e is 50 mm | $\min \left\{ \frac{9,15 + \frac{80}{e \times k_{mod}}}{6,3 \times b}, \frac{6,3 \times b}{e \times k_{mod}} \right\}$ | | | |

For connection with 2 Angle Brackets it must be checked:

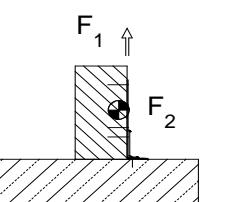

$$\text{for } R_1: R_{\text{bolt,ax,d}} \geq F_{1,d} / n_{\text{bolt}}$$

$$\text{for } R_{2/3}: R_{\text{bolt,lat,d}} \geq F_{2/3,d} / n_{\text{bolt}}$$

$$\text{for } R_{4/5}: \text{Bolt 1: } R_{\text{bolt,ax,d}} \geq F_{4/5,d} \times e / (2 \times b)$$

$$\text{Bolt 2: } R_{\text{bolt,lat,d}} \geq F_{4/5,d} / 2$$

$$R_{4/5,d} \leq R_{1,d} \times b / (2 \times e)$$

In case of combined force the relevant of the following inequalities shall be fulfilled:

$$\left(\frac{F_{1,d}}{R_{1,d}} + \frac{F_{4/5,d}}{R_{4/5,d}} \right)^2 + \left(\frac{F_{2/3,d}}{R_{2/3,d}} \right) \leq 1$$

For $F_{4/5}$ can be used also F_4 or F_5 too, also for $F_{2/3}$ can be used F_2 or F_3 too.

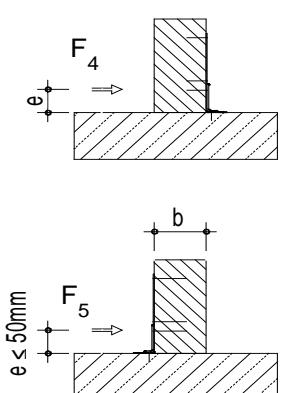

Table D27-4 Characteristic capacity timber beam/column to rigid – 1 Angle Bracket

| 1 Angle Bracket ABR170 or ABR220 per connection | | | Characteristic capacity per connection (kN) | | | |
|---|---------------------|----------|---|--|--|--|
| Nailing pattern | Number of fasteners | | | CNA Connector nail | | |
| | Flange A | Flange B | | 4,0x40 | 4,0x50 | 4,0x60 |
| Nailing pattern 4 | 8 | 2 Bolts | $R_{1,k}$ | min $\begin{cases} 16,5 \\ \frac{12,6}{k_{mod}} \end{cases}$ | min $\begin{cases} 19,9 \\ \frac{12,6}{k_{mod}} \end{cases}$ | $\frac{12,6}{k_{mod}}$ |
| Nailing pattern 5 | 14 | 2 Bolts | $R_{2/3,k}$ | 9,86 | min $\begin{cases} 11,9 \\ \frac{12,3}{k_{mod}} \end{cases}$ | min $\begin{cases} 12,7 \\ \frac{12,3}{k_{mod}} \end{cases}$ |
| Nailing pattern 5 | 14 | 2 Bolts | $R_{4,k}$ | $e < 100\text{mm} \quad \frac{50}{e \times k_{mod}}$ <hr/> $e \geq 100\text{mm} \quad \frac{36}{e \times k_{mod}}$ | | |
| Nailing pattern 5 | 14 | 2 Bolts | $R_{5,k}$ | max $e \leq 50\text{mm}$ | $\frac{1,8}{k_{mod}}$ | |

For connection with one Angle Bracket it must be checked:

for R_1 : $R_{bolt,ax,d} \geq F_{1,d} / n_{bolt}$

for $R_{2/3}$: $R_{bolt,lat,d} \geq F_{2/3,d} / n_{bolt}$

for R_5 : $R_{bolt,ax,d} \geq F_{5,d} \times e / (2 \times b)$

for $R_{4 \text{ or } 5}$: $F_{4 \text{ or } 5,d} / 2$

In case of combined force the relevant of the following inequalities shall be fulfilled:

$$\left(\frac{F_{1,d}}{R_{1,d}} + \frac{F_{4/5,d}}{R_{4/5,d}} \right)^2 + \left(\frac{F_{2/3,d}}{R_{2,3,d}} \right) \leq 1$$

For $F_{4/5}$ can be use also F_4 or F_5 too, also for $F_{2/3}$ can be use F_2 or F_3 too.

Table D27-5 Characteristic capacity timber beam/column to rigid-façade

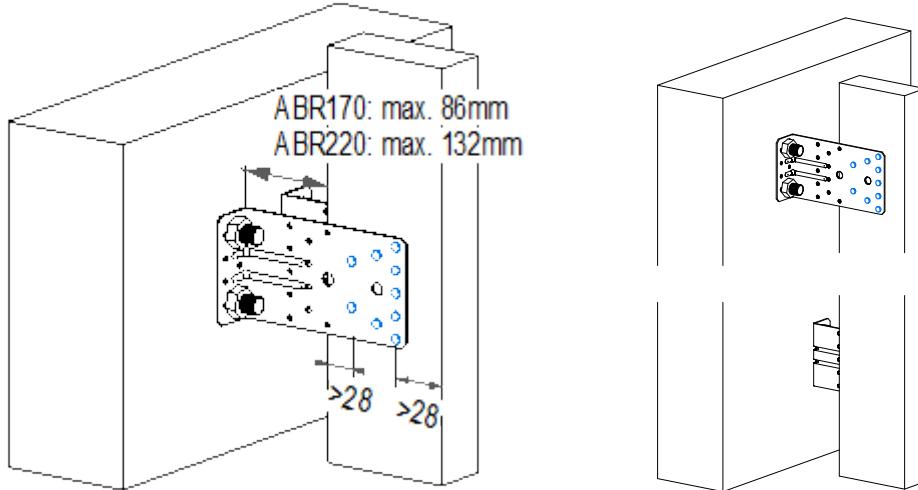

| Angle Bracket ABR220 | | | Characteristic capacity per one ABR (kN) | | | | |
|----------------------|---------------------|--------------|--|-----------------------|-----------------------|-----------------------|-----------------------|
| Nailing pattern | Number of fasteners | | | CNA Connector nail | | | |
| | Flange A | Flange B | | 4,0x35 | 4,0x40 | 4,0x50 | 4,0x60 |
| Nailing pattern 6 | 9 | 2 Bolts | $R_{1,k}$ | min. 14,3 ; 12,1/kmod | min. 15,9 ; 12,1/kmod | min. 19,4 ; 12,1/kmod | min. 20,6 ; 12,1/kmod |

Table D27-6 Characteristic capacity timber beam/column to rigid-façade

| Angle Bracket ABR170 | | | Characteristic capacity per one ABR (kN) | | | | |
|----------------------|---------------------|--------------|--|----------------------|-----------------------|-----------------------|-----------------------|
| Nailing pattern | Number of fasteners | | | CNA Connector nail | | | |
| | Flange A | Flange B | | 4,0x35 | 4,0x40 | 4,0x50 | 4,0x60 |
| Nailing pattern 8 | 9 | 2 Bolts | $R_{1,k}$ | 10,20 | min. 11,8 ; 12,1/kmod | min. 14,9 ; 12,1/kmod | min. 16,9 ; 12,1/kmod |
| | | 2 Bolts | $R_{2/3,k}$ | 3,50 | 3,80 | 4,70 | 4,90 |
| | | 1 or 2 Bolts | $R_{6,k}$ | min. 14,9; 11,0/kmod | min. 16,5; 11,0/kmod | min. 20; 11,0/kmod | min. 21,1; 11,0/kmod |
| Nailing pattern 9 | 4 | 2 Bolts | $R_{1,k}$ | 6,00 | 6,70 | 8,30 | 8,90 |
| | | 2 Bolts | $R_{2/3,k}$ | 3,30 | 3,70 | 4,40 | 4,70 |
| | | 1 or 2 Bolts | $R_{6,k}$ | min. 6,6; 11,0/kmod | min. 7,3; 11,0/kmod | min. 8,9; 11,0/kmod | min. 9,4; 11,0/kmod |

To table 27-5 and 27-6:

- The capacities are given for one ABR, in the case, that in total more ABR are placed alternate opposite on the beam.
- It's given the option to fix the ABR with only one bolt (the upper one) for only the load in direction F_1 and F_6 , the capacity for F_1 is in this case the half.
- The distance of the beam to the support shall be less than 132mm for ABR220, and less than 86mm for ABR170

In case of combined force the relevant of the following inequalities shall be fulfilled:

$$\left(\frac{F_{1/6,d}}{R_{1/6,d}} \right)^2 + \left(\frac{F_{2/3,d}}{R_{2/3,d}} \right)^2 \leq 1,0$$

For $F_{1/6}$ can be used F_1 or F_6 , also for $F_{2/3}$ can be used F_2 or F_3 too.

The anchorage for shear load will be check with $R_{\text{anchorbolt lateral},d} = \frac{R_{2/3,d}}{1,74}$

For connection it must be checked:

for R_1 : $R_{\text{bolt,ax},d} \geq F_{1,d} / n_{\text{bolt}}$

for $R_{2/3}$: $R_{\text{bolt,lat},d} \geq F_{2/3,d} / 1,74$

for $R_{2/3}$: $R_{\text{bolt,ax},d} \geq F_{2/3,d} \times 2/3$ for (ABR170)

for $R_{2/3}$: $R_{\text{bolt,ax},d} \geq F_{2/3,d} \times 4/3$ for (ABR220)

for R_6 : constructive fixing

Note: 1) only available for a connection in a round hole, not with the version with oblong hole.

When there are two angle brackets, the anchor group must resist to F1 and/or F2

When there is one angle bracket, the anchor must resist to F1 and/or F2

General notes to all capacity tables:

- b, e and f are in mm.
- Wane may not occur under the angle bracket.

Table D31-9 E5/1,5 – Slip modulus k_{ser}

| 2 x E5/1,5 | | | K_{ser} [kN/mm] | | | |
|--------------|----------|--------------|-------------------|-------------|---------------|-------------|
| Nail pattern | Fastener | | For F_1 | | For $F_{2/3}$ | |

| 3 | 7 | 6 | 3,05 | - | 2,24 | - |
| 4 | 7 | 1 x M10 Bolt | 1,25 | - | 4,25 | - |
| 5 | 1 | 1 | - | 0,689 | - | - |
| 6 | 1 | 1 x M10 Bolt | - | 0,903 | - | - |

In case of 1 angle brackets, k_{ser} values can be divided by 2.

Ductility Class

The connection of timber joist to a rigid support with an E5/1.5 with CNA4.0x35 offers a mean ratio for F_1 load direction $D_{u,80\%} / D_y < 4$ ($D_{u,80\%} / D_y$ ratio disclosed in EN12512), therefore this connection has a low capacity to dissipate energy according to EN 1998-1:2004 §8 and is suitable for dissipative zone of DCL class building.

The connection of timber joist to a rigid support with an E5/1.5 with CNA4.0x35 offers a mean ratio for $F_{2/3}$ load direction $D_{u,80\%} / D_y > 6$ ($D_{u,80\%} / D_y$ ratio disclosed in EN12512), therefore this connection has a high capacity to dissipate energy according to EN 1998-1:2004 §8 and is suitable for dissipative zone of DCH class building.

The anchor or fastener in the support shall be designed with sufficient overstrength to ensure the development of cyclic yielding in the dissipation zones as disclosed in 8.6 (4) in EN 1998 -1:2004.

| | | | I | 9,2 | 9,2 | 9,2 | 9,2 | 6,6 | 7,6 | 9,7 | 11,1 |

Note: 1) only available for a connection in a round hole, not with the version with oblong hole.

When there are two angle brackets, the anchor group must resist to F1 and/or F2

When there is one angle bracket, the anchor must resist to F1 and/or F2

General notes to all capacity tables:

- b, e and f are in mm.
- Wane may not occur under the angle bracket.

Table D32-7 E5/2 – Slip modulus k_{ser}

| 2 x E5/2 | | | K_{ser} [kN/mm] | |
|--------------|----------|--------------|-------------------|---------------|
| Nail pattern | Fastener | | For F_1 | For $F_{2/3}$ |
| | Flange A | Flange B | CNA4,0x35 | CNA4,0x35 |
| 3 | 7 | 6 | 2,96 | 1,96 |
| 4 | 7 | 1 x M10 Bolt | 3,90 | 3,81 |

In case of 1 angle brackets, k_{ser} values can be divided by 2.

Ductility Class

The connection of timber joist to a rigid support with an E5/2 with CNA4.0x35 offers a mean ratio for F_1 load direction $D_{u,80\%} / D_y < 4$ ($D_{u,80\%} / D_y$ ratio disclosed in EN12512), therefore this connection has a low capacity to dissipate energy according to EN 1998-1:2004 §8 and is suitable for dissipative zone of DCL class building.

The connection of timber joist to a rigid support with an E5/2 with CNA4.0x35 offers a mean ratio for $F_{2/3}$ load direction $D_{u,80\%} / D_y > 6$ ($D_{u,80\%} / D_y$ ratio disclosed in EN12512), therefore this connection has a high capacity to dissipate energy according to EN 1998-1:2004 §8 and is suitable for dissipative zone of DCH class building.

The anchor or fastener in the support shall be designed with sufficient overstrength to ensure the development of cyclic yielding in the dissipation zones as disclosed in 8.6 (4) in EN 1998 -1:2004

| k _{ax} | 1,17 | 0,65 | 2,35 x e / (b + 17) | - |
| k _{lat} | - | 0,50 | - | 1,00 |

General notes to all capacity tables:

- b, e and f are in mm.
- Wane may not occur under the angle bracket.

Table D33-7 Characteristic capacity timber beam to timber beam – 2 Angle Brackets, Nailing pattern 4

| Timber to timber connection | | | 2 angle brackets per connection | | | |
|-----------------------------|-------------------|-----------|---------------------------------|-------|---|------------------|
| Item | Nailing Pattern | Fasteners | | | Characteristic capacities [kN] - Timber C24 | |
| | | Header | | Joist | | R _{1,k} |
| | | Qty | Type | Qty | Type | SS-H Ø8x40 |
| AT1 | Nailing pattern 4 | 1 | SS-H | 1 | SS-H | 4,5 |
| | | | | | | 2,1 |

Table D33-8 Characteristic capacity timber beam to rigid support – 2 Angle Brackets, Nailing pattern 5

| Timber to rigid connection | | | 2 angle brackets per connection | | | |
|----------------------------|-------------------|-----------|---------------------------------|-------|---|------------------|
| Item | Nailing Pattern | Fasteners | | | Characteristic capacities [kN] - Timber C24 | |
| | | Header | | Joist | | R _{1,k} |
| | | Qty | Type | Qty | Type | SS-H Ø8x40 |
| AT1 | Nailing pattern 5 | 1 | Bolt Ø8 | 1 | SS-H | 5,9 |
| | | | | | | 4,1 |

Table D33-9 AT1 Slip modulus k_{ser}

| Configuration | Nailling pattern | R ₁ load direction | R ₂ load direction |
|---|------------------|-------------------------------|-------------------------------|
| | | k _{ser} [kN/mm] | k _{ser} [kN/mm] |
| Timber to timber (with SS-H screws Ø8.0x40) | 4 | 0,305 | 0,095 |
| Timber to rigid (with SS-H screws Ø8.0x40) | 5 | 0,854 | 0,585 |

These slip modulus are given for 1 angle bracket. In case of 2 brackets, values can be obtained by multiplying the above by 2.

| Bolt factor | for F_1 | for $F_{2/3}$ |
|-------------|-----------|---------------|
| k_{ax} | 0,98 | 0,91 |
| k_{lat} | - | 0,50 |

For each bolt it's needed to check: $R_{bolt,d,lateral} \geq k_{lat} \times F_{i,d}$; $R_{bolt,d,axial} \geq k_{ax} \times F_{i,d}$; and also the combination

General notes to all capacity tables:

- b, e and f are in mm.
- Wane may not occur under the angle bracket.

Annex D42 – E19/3

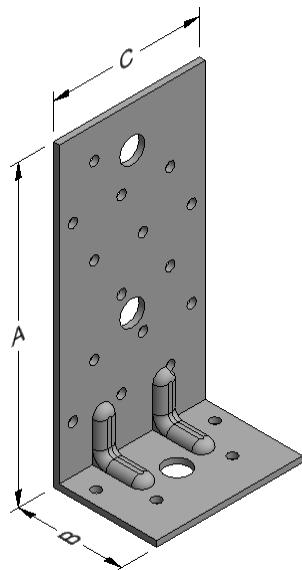

Product Name:

| Product Name | Material reference acc. to clause II-1 | Alternative product names |
|--------------|--|---------------------------|
| E19/3 | Steel ref. 1 | - |
| E19/3S | Steel ref. 2 | - |
| E19/3S2 | Steel ref. 3 | - |
| E19/3Z | Steel ref. 6 | - |

Connector Size Range:

| Model no. | Dimensions [mm] | | | | Holes flange A | | Holes flange B | |
|-----------|-----------------|----|----|-----------|----------------|-----|----------------|-----|
| | A | B | C | Thickness | Ø5 | Ø13 | Ø5 | Ø13 |
| E19/3 | 153 | 53 | 75 | 3,0 | 15 | 2 | 4 | 1 |

Nailing pattern 2

CSA5,0x50 on the bottom

Nailing pattern 3

CSA5,0x50 on each side

Nailing pattern 4

1x bolt M20 or a 20 mm dowel with additional securing pins

For a downward force, at least the fasteners shown in Nailing pattern 1, 2 and 3 shall be inserted. For an uplift force, the fasteners shown in Nailing pattern 1, 2, 3, and 4 are required.

Design Basis:

The loads have been assumed to act on a cantilevering horizontal timber member fastened to a vertical timber by the MAXIMUS connector using the fastener pattern shown in figure Nailing pattern 1 up to 4. Other spans or loads can be verified by engineering judgement. The relevant moment to evaluate deflection is stated as: $M=q*L^2/2$

Possible load distributions which have been considered:

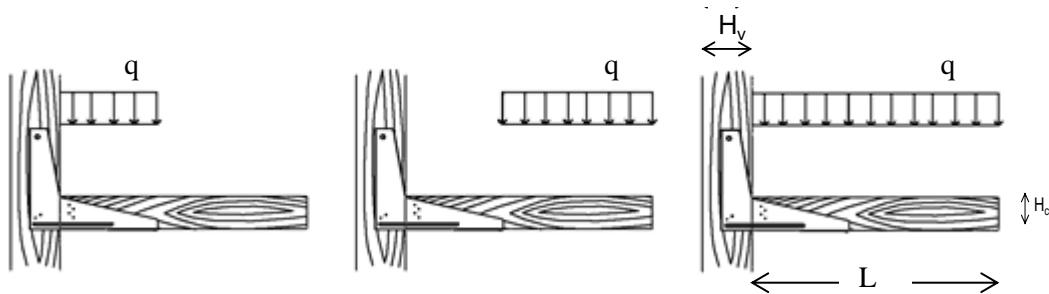

Figure: MAXIMUS possible load distributions

Modified characteristic capacity:

The strength and stiffness values determined are directly applicable to timber of the strength class C24 and better with the following dimensions:

The horizontal cantilevered timber member: Depth $H_c = 160$ mm ; Width B as vertical member (column)

The vertical member: Depth $H_v = 220$ mm¹⁾ for $B < 139$ mm

$220 \text{ mm}^1) \leq H_v \leq 340 \text{ mm}$ for $139 \leq B < 159$ mm

$220 \text{ mm}^1) \leq H_v < 700 \text{ mm}$ for $B \geq 159$ mm

1): These values may be reduced to 180 mm if only downward forces can occur.

Higher depths H_v can be tolerated if a splitting reinforcement designed for at least $F_k = 8,8 \text{ kN}$ is applied near the dowel. If the width B is smaller than 120 mm the characteristic load-carrying capacity can be determined by applying a factor $B/120 \text{ mm}$ to the capacities listed in table D50-1.

The characteristic load-carrying capacity $q_{R,k}$ for a cantilever with a length $L = 1200 \text{ mm}$ is listed in the table D50-1 below. The common types of distributed loads have been evaluated also considering the possible positions of distributed loads shown in the figure D50-3.

Table D50-1 Characteristic capacity timber beam to column – 1 MAXIMUS

| Load duration | Spring stiffness* C_ϕ of the connection for a downward force (kNm) | Characteristic distributed load capacity $q_{R,k}$ per connector (kN/m) and a lever arm $L=1200\text{mm}$ | |
|---------------|---|---|--------|
| | | downward | uplift |
| P | 43 | 7,02 | -2,60 |
| L | 43 | | |
| M | 48 | | |
| S | 67 | | |
| I | 85 | | |

* C_ϕ shall be reduced to 60% of these values if the timber moisture exceeds 18% for longer term

Annex D51 – AT2

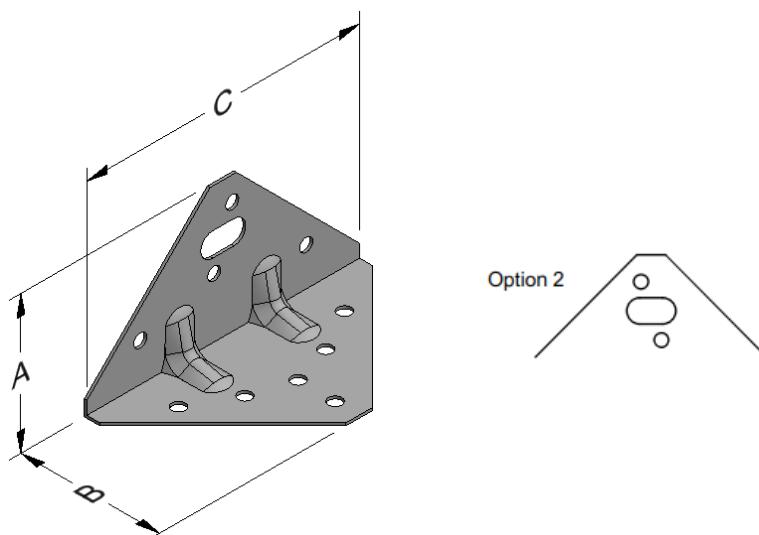

Product Name:

| | 10,5 | 6,66 | 7,45 | 8,22 | | | | | | | | |

The tables are based on the characteristic capacities of the used screws with $R_{lat,k}$ for the lateral (shear) capacity and $R_{ax,k}$ for the axial (tension) capacity.

For blank cells are no higher values given as the last filled cell before in the same column.

The values for characteristic capacities of the fastener with $R_{lat,k}=4,75$ kN and $R_{ax,k}=7,04$ kN are for connection as described following with using screws 8,0x120 ASSY Kombi 3.0 according to ETA 11/0190:

Chipboard class P4 according to EN 13986.

Cement-bonded particleboard (in drawings named cement chipboard) according to EN 13986.

Both layers are connected shear fixed with the timber.

Characteristic Capacities under vertically upward load (F_1)

For the types **A21** and **A23** the following formula needs to be used:
Therefore the values $R_{1,k}$ are stated in the table below.

$$R_{1,d} = R_{1,k} \times \frac{k_{\text{mod}}}{1,3}$$

For the types **A33** and **A88** the following formula needs to be used:
The values $R_{1,k} + \text{power} + R_{k,\text{steel}}$ are stated in Table D55-1 below.

$$R_{1,d} = \min \left(\frac{R_{1,k}}{(k_{\text{mod}})^{\text{power}}} \times \frac{k_{\text{mod}}}{1,3}; \frac{R_{k,\text{steel}}}{1,3} \right)$$

Characteristic Capacities under horizontal load ($F_{2/3}$)

For $F_{2/3}$ -horizontal force the following formula needs to be used:
The values $R_{2/3,k}$ are stated in Table D55-1 below.

$$R_{2/3,d} = R_{2/3,k} \times \frac{k_{\text{mod}}}{1,3}$$

Characteristic Capacities under horizontal load ($F_{4/5}$)

For $F_{4/5}$ -horizontal force the following formula needs to be used:
The values for $R_{4/5,k}$ connected with 2 angle brackets and
for $R_{4,k} / R_{5,k}$ connected with 1 angle bracket are stated in Table D55-1 below.
Supported Memer with a minimum width $b_t=60\text{mm}$.
The load capacities $R_{4,k}$ are split in two; with and without rotation of purlin.

$$R_{4/5,d} = R_{4/5,k} \times \frac{k_{\text{mod}}}{1,3}$$

| | | | | | | | | | | | 150 | 13,1 | 13,3 | 13,7 | 14 |

1) Minimum width of timber member b_t = 60 mm

Regarding F_{2/3} – other fasteners may be used using the following formula and factors. Alternatively, the values from above table can be reduced accordingly:

$$R_{2/3,k} = \min \left\{ \sqrt{\frac{1}{\left(\frac{1}{k_{lat,v} \times R_{lat,k}} \right)^2 + \left(\frac{1}{k_{ax,v} \times R_{ax,k}} \right)^2}}, \sqrt{\frac{1}{\left(\frac{1}{k_{lat,h} \times R_{lat,k}} \right)^2 + \left(\frac{1}{k_{ax,h} \times R_{ax,k}} \right)^2}} \right\}$$

| Factor | Nailing pattern 1 | Nailing pattern 2 |
|--------------------|-------------------|-------------------|
| k _{lat,v} | 2,1 | 4,3 |
| k _{ax,v} | 41,3 | 30,7 |
| k _{lat,h} | 2,9 | 5,4 |
| k _{ax,h} | 6,2 | 13,3 |

| | | | Special ²⁾ | $n \times R_{lat,k} \times 0,8$ | $10,1/k_{mod}$ |

1) Normal = spacing of nails according to EN 1995-1-1

2) Special = spacing of nails according to figure below

The washer with $t \geq 8$ mm has to fulfil the minimum requirement: steel with $f_{y,k} \geq 235$ N/mm²

With:

n = number of nails

$R_{lat,k}$ = characteristic lateral Load-carrying capacity of one connector nail / screw

It is to check additionally for the anchorage: $R_{bolt,ax,d} \geq F_{1,d} \times 1,47$

With:

$R_{bolt,ax,d}$ = the axial design capacity of the anchor / bolt

with large connector screws type SS-H

Characteristic Capacities:

The values $R_{i,k}$ for one ABR255 per connection, with prevention of rotation (so that only shear force is acting), are stated in the tables below.

For a connection with 2 x ABR255 the values can be doubled.

The following standard formula needs to be used:

$$R_{i,d} = R_{i,k} \times \frac{k_{\text{mod}}}{1,3}$$

Table D58-1: Characteristic capacity beam to beam – 1 Angle Bracket F₁

**) Different lever arms for:

Nailing pattern 1: b = 28 mm ; e = 15 mm - Intermediate values of b and e can be found by linear interpolation

Nailing pattern 2: b = 28 mm ; e = 15 mm - Intermediate values of b and e can be found by linear interpolation

Nailing pattern 3: b = 38 mm ; e = 20 mm - Lever arms are fixed

Nailing pattern 7: b = 38 mm ; e = 20 mm - Lever arms are fixed

Nailing pattern 8: b = 38 mm ; e = 20 mm - Lever arms are fixed

Nailing pattern 9: b = 38 mm ; e = 20 mm - Lever arms are fixed

Each bolt shall be checked using the following expressions:

$$V_{y,d} = \frac{R_{2/3,d}}{2} \quad M_{x,d} = \frac{R_{2/3,d}}{2} \cdot e \quad M_{y,d} = \frac{R_{2/3,d}}{2} \cdot b$$

Nailing pattern NP4, NP5, NP6, NP7, NP8 and NP9 have been specifically developed for cross laminated timber application. They can be used for applications with other timber based materials provided that the materials comply with the spacing and distances of fasteners in CLT.

| | Flange A | Flange B | 4,0x35 | 4,0x40 | 4,0x50 | 4,0x60 | 4,0x35 | 4,0x40 | 4,0x50 | 4,0x60 |
| Nailing pattern 1 | 10 | 4 | 2,94 | 3,92 | 4,9 | 5,81 | 6,07 | 7,01 | 8,86 | 10,18 |
| Nailing pattern 2 | 5 | 4 | 2,94 | 3,92 | 4,9 | 5,81 | 5,65 | 6,22 | 7,47 | 8,12 |
| Nailing pattern 3 | 5 | 4 | 2,94 | 3,92 | 4,9 | 5,81 | 3,49 | 3,82 | 4,57 | 4,94 |
| Nailing pattern 4 | 10 | 1 Bolt | 16,2/k _{mod} | 16,2/k _{mod} | 16,2/k _{mod} | 16,2/k _{mod} | 4,82 | 6,26 | 7,51 | 8,58 |
| Nailing pattern 5 | 5 | 1 Bolt | 15,4/k _{mod} | 16,2/k _{mod} | 16,2/k _{mod} | 16,2/k _{mod} | 4,1 | 5,2 | 6,05 | 6,73 |
| Nailing pattern 6 | 5 | 1 Bolt | 16,2/k _{mod} | 16,2/k _{mod} | 16,2/k _{mod} | 16,2/k _{mod} | 1,3 | 1,7 | 2,05 | 2,36 |

The necessary capacity of bolt has to be as minimum:

$$R_{\text{bolt},\text{axial}} = F_{1,d} \times 1.65$$

$$R_{\text{bolt},\text{axial}} = F_{2,d} \times 0.4 \quad R_{\text{bolt},\text{lat}} = F_2$$

With:

$R_{\text{bolt},\text{axial}}$ = axial capacity of the bolt / both bolts (connection with 1 / 2 ABD)

$R_{\text{bolt},\text{lat}}$ = lateral capacity of the bolt / both bolts (connection with 1 / 2 ABD)

For connection with one ABD, the half of capacities as for connection with 2 ABD can be used, if the timber elements are prevented against rotation.

Characteristic capacity:

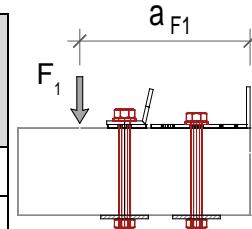

Load directions

Additional Angle Bracket at the lower side

Table 61-1 Characteristic capacities force direction F_1

| Washer on the lower side | Type 120 $a_{dia} = 54\text{mm}$ $R_{1a,k} [\text{kN}]$ | Type 180 $a_{dia} = 90\text{mm}$ $R_{1a,k} [\text{kN}]$ | Type 240 $a_{dia} = 135\text{mm}$ $R_{1a,k} [\text{kN}]$ |
|--------------------------|---|---|--|
| U40x3 | min(14,6 ; 10,17/k _{mod}) | min(14,6 ; 10,64/k _{mod}) | min(14,6 ; 10,71/k _{mod}) |
| 30x30x3 | min(9,8 ; 10,17/ k _{mod}) | min(9,8 ; 10,64/k _{mod}) | min(9,8 ; 10,71/k _{mod}) |

$$R_{1,k} = R_{1a,k} \times a_{dia} / a_{F1}$$

If a_{F1} is smaller than $a_{dia} + 8\text{mm}$, the calculation has to be done with $a_{F1} = a_{dia} + 8\text{mm}$.

The required capacities of the anchoring connected to the wall shall be at least:

$$R_{h1,d} = a_{F1} / 330\text{mm} \times F_{1,d}$$

$$R_{v1,d} = 1/n \times F_{1,d}$$

$$R_{v2,d} = 1/n \times F_{1,d}$$

$$R_{v3,d} = 1/n \times F_{1,d}$$

$$R_{h3,d} = -a_{F1} / 330\text{mm} \times F_{1,d}$$

n = number of anchorings (3 for using of all three bolts or 2 for bolts at bottom and top)

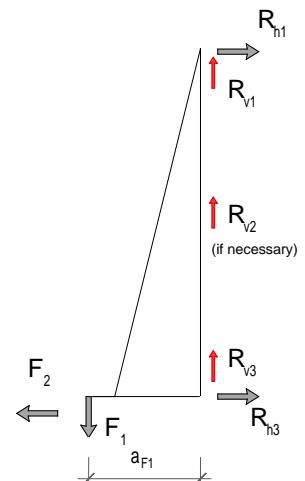

Table 61-2 Characteristic capacities force direction F_2 (without the AB4)

| $R_{2,k} [\text{kN}]$ | | | |
|-----------------------|-----------------------|-----------------------|-----------------------|
| type 120 | type 180 | type 240 | AB4 |
| 2,34/k _{mod} | 2,34/k _{mod} | 2,34/k _{mod} | 2,34/k _{mod} |

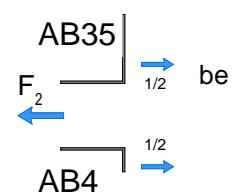

The AB4 shall be used only additionally with the types 120 to 240.

The required capacity of the lower bolt shall be at least: $R_{h3,d} = F_{2,d}$

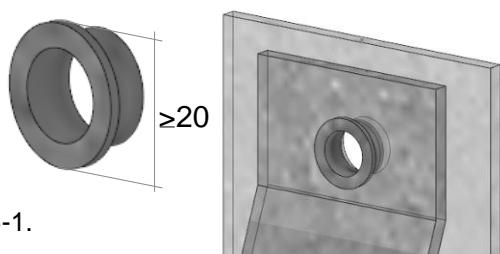

For a connection with the angle bracket AB4 on the lower side of the beam, the force $F_{2,d}$ shall be equally distributed to both brackets.

The design capacities have to be calculated as:

$$R_{i,d} = R_{i,k} \times k_{mod} / g_M$$

The brackets are intended to be connected with bolts or screws with a Ø of 10mm. In case timberscrews are used for fixing, also screws with a smaller diameter than Ø10 can be applied with a reducer like the one shown aside. The reducer has to embed into both steel plates.

For the distances of the bolts in the beam has to be observed the EN1995-1.
The drilling in the beam should be done on site.

Load combination:

$$F_{1,d} / R_{1,d} \leq 1 \text{ and } F_{2,d} / R_{2,d} \leq 1 \quad \text{check of connector}$$

The loads for the anchoring have to be added up, and have to be checked separately according to the individual anchoring type.

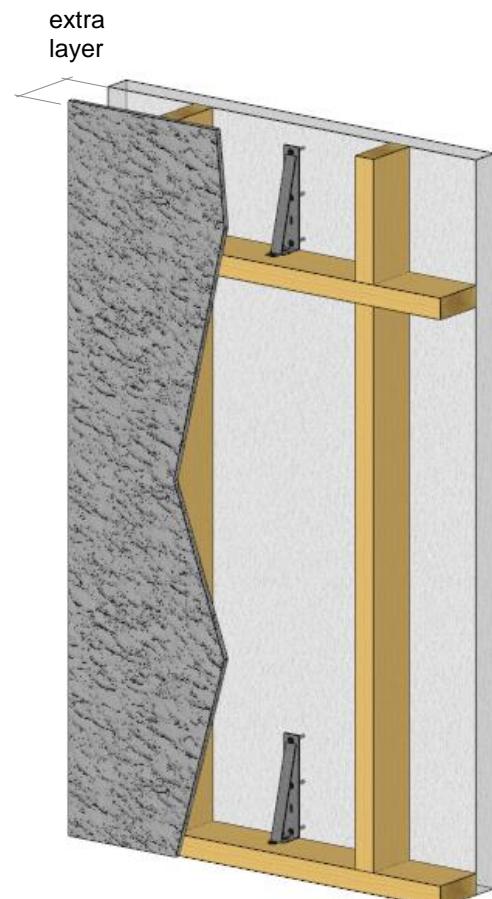

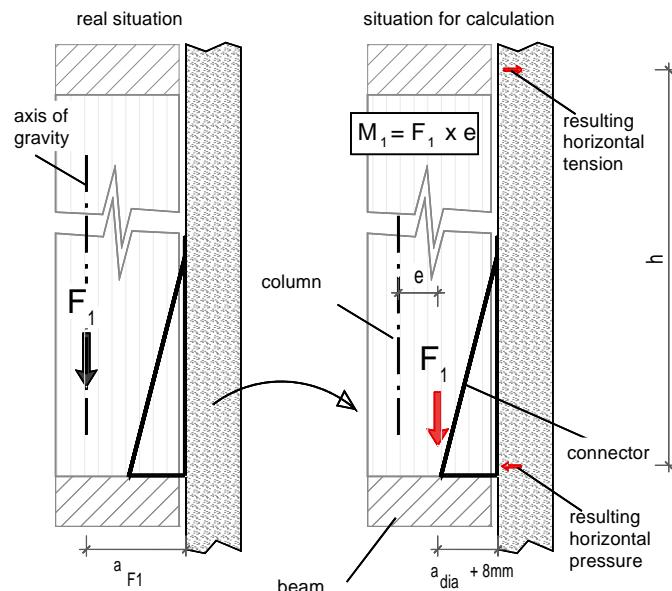

Application:

The typical installation of the connector may be as follows:

An extra layer is added to an existing wall. Columns are placed between the horizontal beams, and on these columns are fixed the outer layer. Insulation is placed between the new outer layer and the existing wall.

Due to the columns, the rotation of the beams is prevented. The vertical load can be calculated with a distance ($a_{dia} + 8\text{mm}$) from the wall .

| Type | a_{dia} [mm] |
|---------|----------------|
| ABTR120 | 54 |
| ABTR180 | 90 |
| ABTR240 | 135 |

Generally the brackets shall be calculated with a lever arm of F_1 of $a_{F1} = (a_{dia} + 8\text{mm})$
For beam distances $h \geq 2000\text{mm}$ the resulting centering forces can usually be disregarded.
Else all details shall be designed in accordance with EC5.

Annex D62 – ACW155

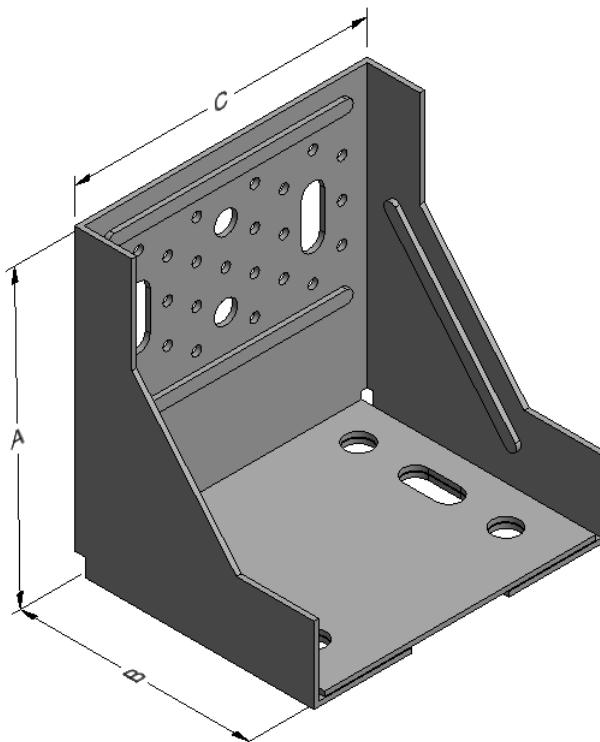

Product Name:

| Product Name | Material reference acc. to clause II-1 | Alternative product names |
|--------------|--|---------------------------|
| ACW155 | Steel ref. 1 | - |

Drawing:

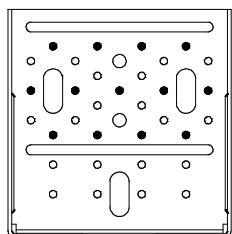

Nailing pattern:

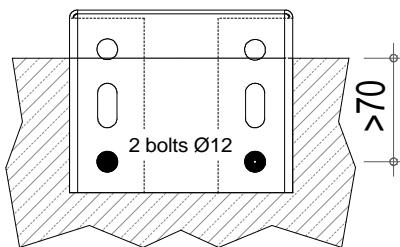

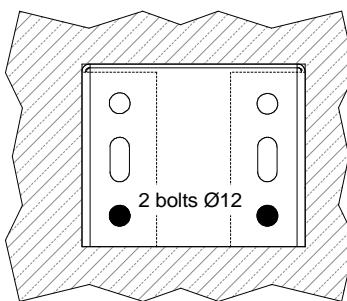

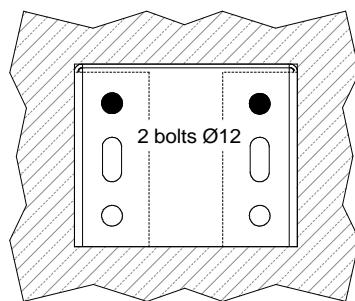

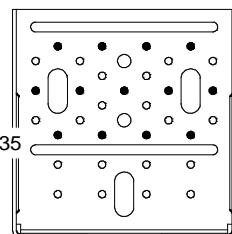

nail/ bolt pattern: A

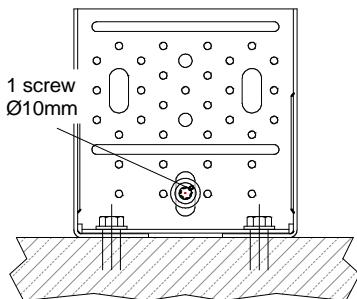

nail/ bolt pattern: B

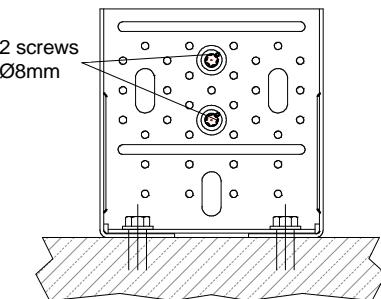

nail/ bolt pattern: C

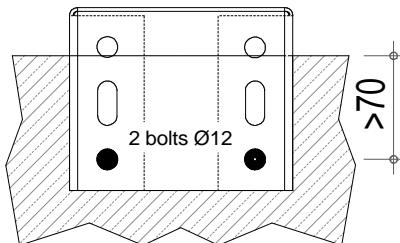

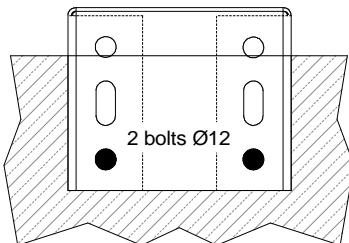

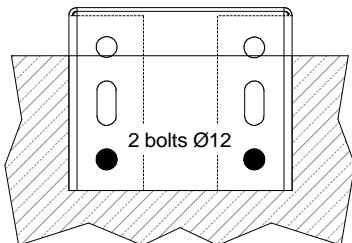

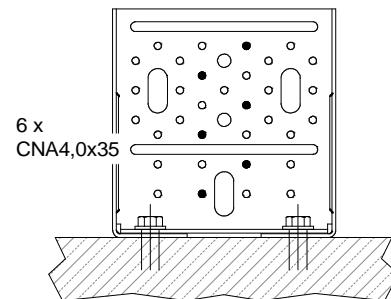

nail/ bolt pattern: D

nail/ bolt pattern: E

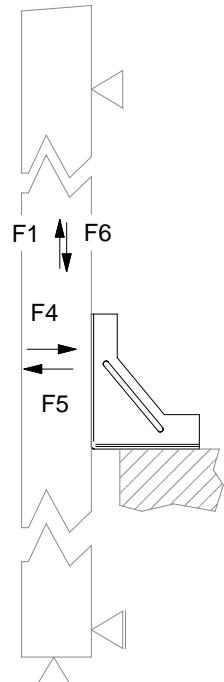

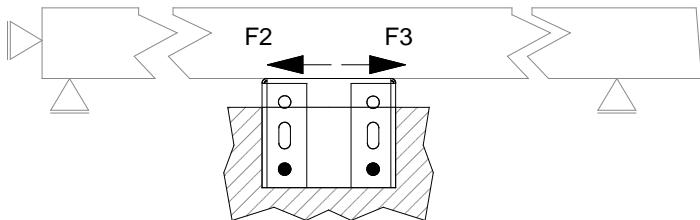

nail/ bolt pattern: F

For the nail/bolt pattern A and B, the bolts are positioned with a sufficient distance to any border. The other nail/bolt patterns are for anchorage which has a minimum of 70 mm distance to the border of the concrete.

For nailing patterns B to F, the connected timber elements are free to rotate as the connected elements are fixed at minimum to one other point.

For the nailing patterns D to F, it is determined that a vertical load (F6) is always present.

Load directions:

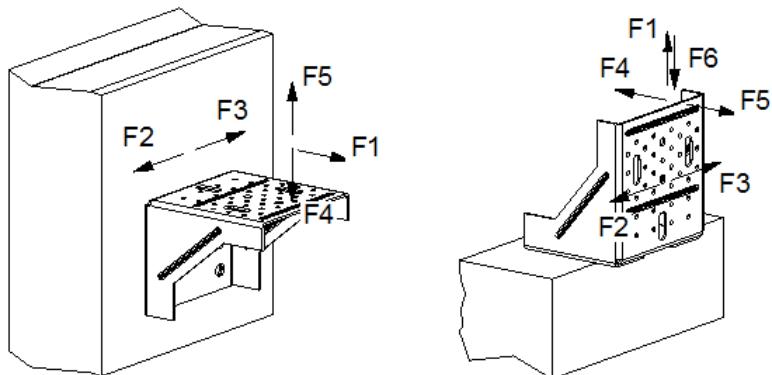

Table 62-1 Characteristic values

| Nailing pattern | Number of fasteners | | Characteristic capacities [kN] | | | | |
|-----------------|---------------------|---------------|--------------------------------|--------------------|------------------|------------------|------------------|
| | Flange A | Flange B | R _{1,k} | R _{2/3,k} | R _{4,k} | R _{5,k} | R _{6,k} |
| A | 13 CNA4,0x35 | 2 x M12 Bolts | 16,3 | 15,3 | 21,1 | 5 | - |
| B | 13 CNA4,0x35 | 2 x M12 Bolts | 8,8 | 11,9 | 6 | 11,4 | 21,2 |
| C | 13 CNA4,0x35 | 2 x M12 Bolts | 8,8 | 8,9 | 6 | 11,4 | 21,2 |
| D | 1 ESCR Ø10x140 | 2 x M12 Bolts | - | - | 7,5 | 5,7 | - |
| E | 2 ESCR Ø8x100 | 2 x M12 Bolts | - | - | 7,5 | 3,92 | 7,73 |
| F | 6 CNA4,0x35 | 2 x M12 Bolts | - | - | 7,5 | 2,64 | 10,1 |

The fasteners in the joist/beam can be replaced with different fasteners but must as a minimum have the same capacities of the specified fasteners. For the nail pattern A to C to connect the ACW155, other screws can be used but are also required to have a minimum capacity as the same as the specified fasteners.

The connections with the nail pattern D to F can be used also for the connection of a column.

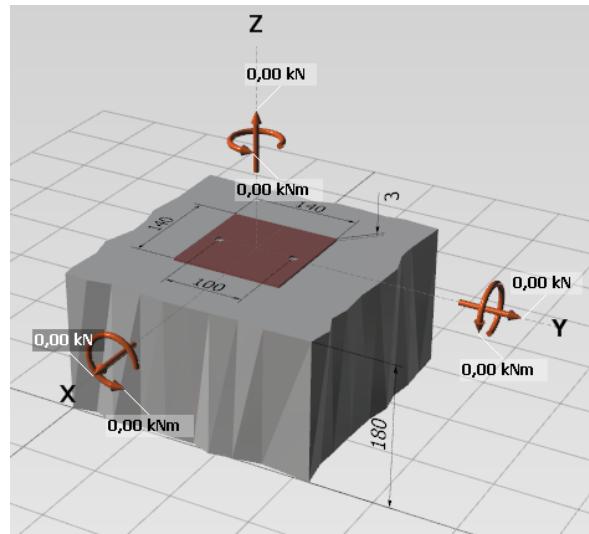

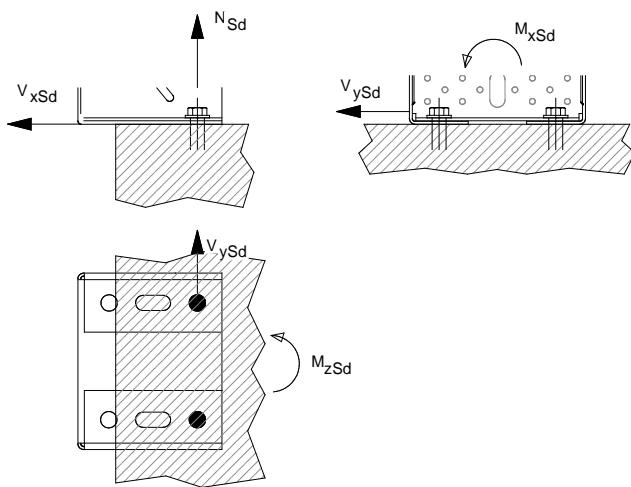

Load combination: $\sum (F_{i,d} / R_{i,d}) \leq 1,0$

The anchorage must be checked with the following loads:

Table 62-2 Bolt factors

| Nailing pattern | The anchoring has to be check for following: | | | | | | | |
|-----------------|--|-----------|------------------------------|------------------------------|-----------|-----------|----------------------|----------------------|
| | for F_1 | for F_2 | | | for F_4 | for F_5 | | for F_6 |

Drawings:

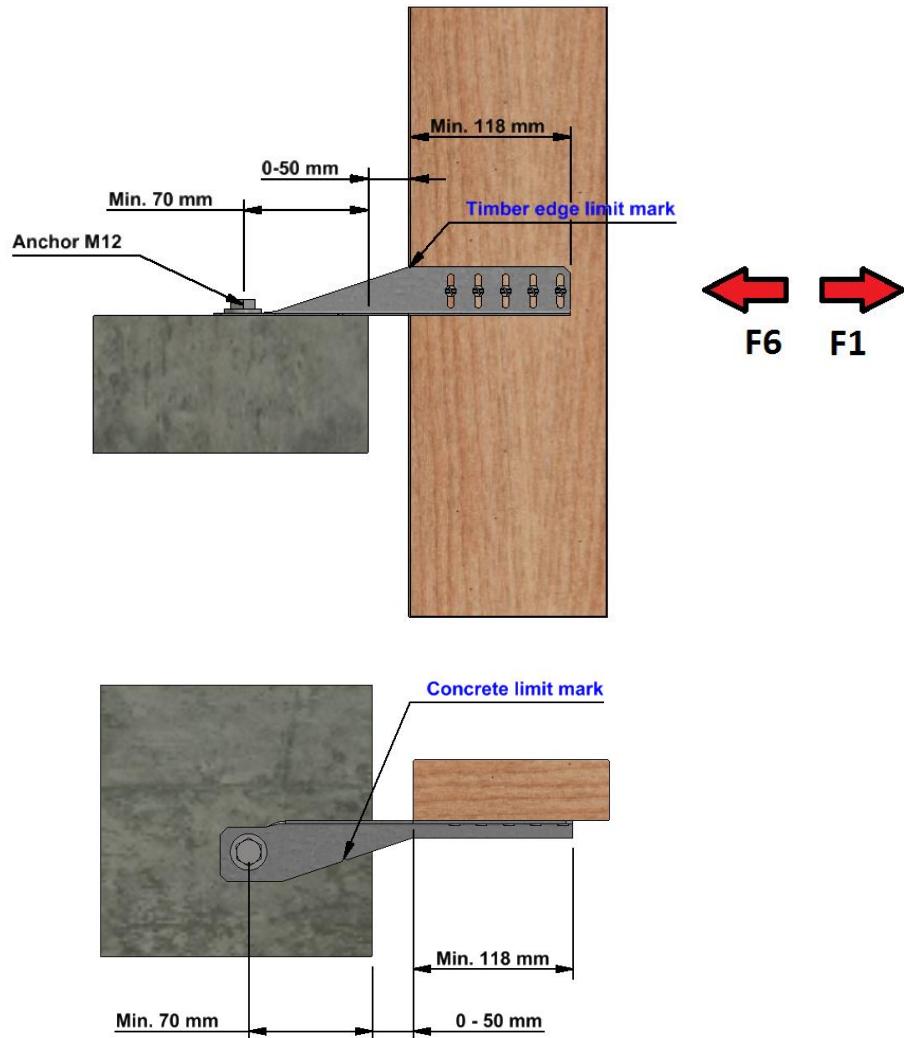

CCWL

CCWR

Typical installation and force directions:

Maximum gap width between edge concrete and timber stud: 50 mm

Minimum distance between anchor and concrete edge: 70 mm

Minimum distance between timber stud edge and end of CCWR/L: 118 mm

Minimum timber stud thickness: 45 mm

Because of the eccentricity of the anchor to the nails alignment, the arrangement of CCWR connectors shall fulfil the two following conditions:

- For each unite timber frame wall, no matter how long it is, there shall be at least one of each CCWR and CCWL as illustrated below:

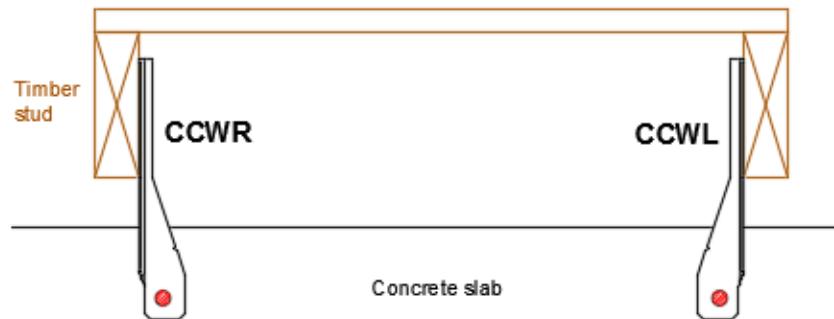

Figure 5: CCW arrangement

- There shall be at least one CCW in the opposite way every four connector as illustrated below:

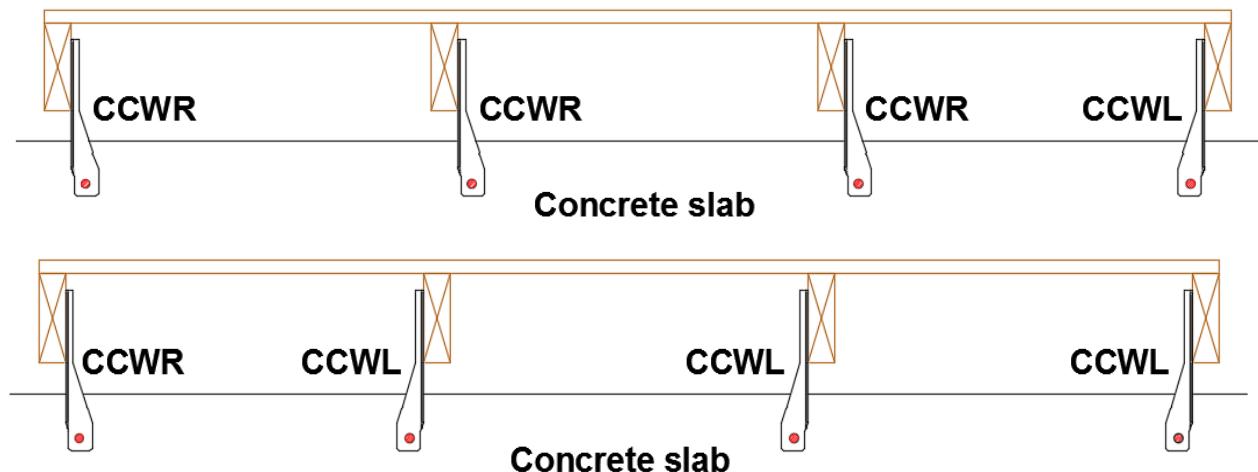

Figure 6: CCW arrangement

Nailing and screwing pattern:

Nailing pattern: 5 CNA4.0x35 or 5 CSA5.0x35 set in centered position

Screwing pattern 1: 3 CSA5.0x40 set in centered position

| ABGU360 | 105 | 40 | 360 | 180 | 3.0 | 10 | Ø5 | Ø5 Ø10.5 |

Drawings:

Characteristic capacity:

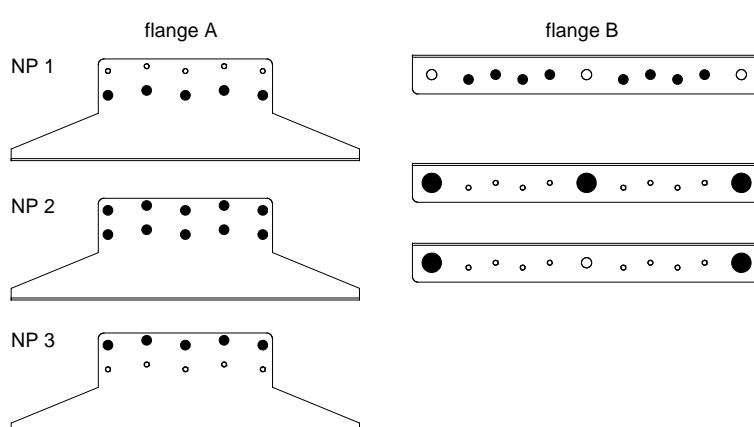

The capacities are given for one angle bracket, based on the assumption, that a connection is made with minimum 2 angle brackets staggered. On this way it's guaranteed, that no rotation of the connected beam may happen.

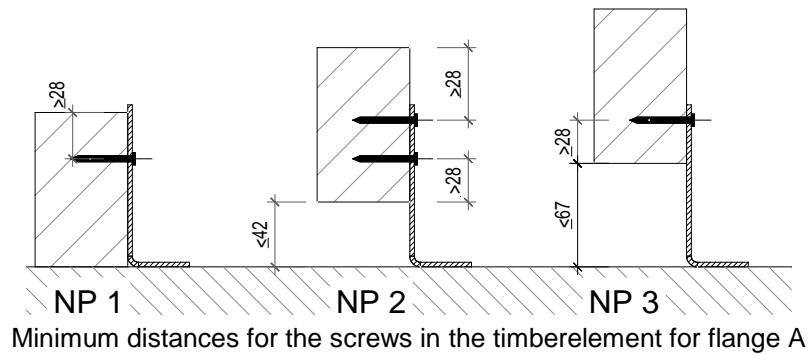

Table 65-1 Characteristic capacities timber to timber

| Nailing pattern | number of fastener | | characteristic capacities per connection [kN] | | | | | |
|-----------------|--------------------|----------|---|-----------|-----------|--------------------|-----------|-----------|
| | | | R1.k | | | R _{2/3.k} | | |
| | Flange A | Flange B | CSA5,0x35 | CSA5,0x40 | CSA5,0x50 | CSA5,0x35 | CSA5,0x40 | CSA5,0x50 |
| NP1 | 5 | 8 | 8,4 | 9,4 | 11,1 | 4,9 | 5,4 | 6,5 |
| NP2 | 10 | 8 | 8,4 | 9,4 | 11,1 | 8,3 | 9,3 | 11 |
| NP3 | 5 | 8 | 8,4 | 9,4 | 11,1 | 3,8 | 4,3 | 5,1 |

Table 65-2 Characteristic capacities timber to rigid support

| Nailing pattern | number of fastener | | characteristic capacities per connection [kN] | | | | | |
|-----------------|--------------------|--------------|---|-------------------------------------|-------------------------------------|--------------------|-----------|-----------|
| | | | R _{1.k} | | | R _{2/3.k} | | |
| | Flange A | Flange B | CSA5,0x35 | CSA5,0x40 | CSA5,0x50 | CSA5,0x35 | CSA5,0x40 | CSA5,0x50 |
| NP1 | 5 | 2 or 3 bolts | 10 | 11,1 | min(11,1 12,6/k _{mod}) | 4,9 | 5,4 | 6,5 |
| NP2 | 10 | 2 or 3 bolts | min(19,9 12,6/k _{mod}) | min(22,2 12,6/k _{mod}) | min(26,3 12,6/k _{mod}) | 8,3 | 9,3 | 11 |
| NP3 | 5 | 2 or 3 bolts | 10 | 11,1 | min(11,1 12,6/k _{mod}) | 3,8 | 4,3 | 5,1 |

For connection to rigid support has to be check the anchoring as following:

It has to check, that the bolts are able to absorb:

$$F_{ax,bolt} = F_{1,d} \times 1.36$$

and

$$F_{lat,bolt} = R_{2,d}$$

The combination has to be check also.

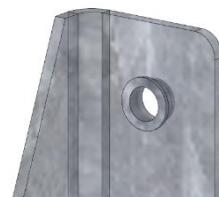

The brackets are intendend to be connected with bolts or screws with a Ø of 10mm. In case timberscrews are used for fixing, also screws with a smaller diameter than Ø10 can be applied with a reducer like the one shown aside. The reducer has to embed into the steel

plate.

For the distances of the bolts in the beam has to be observe the EN1995-1.

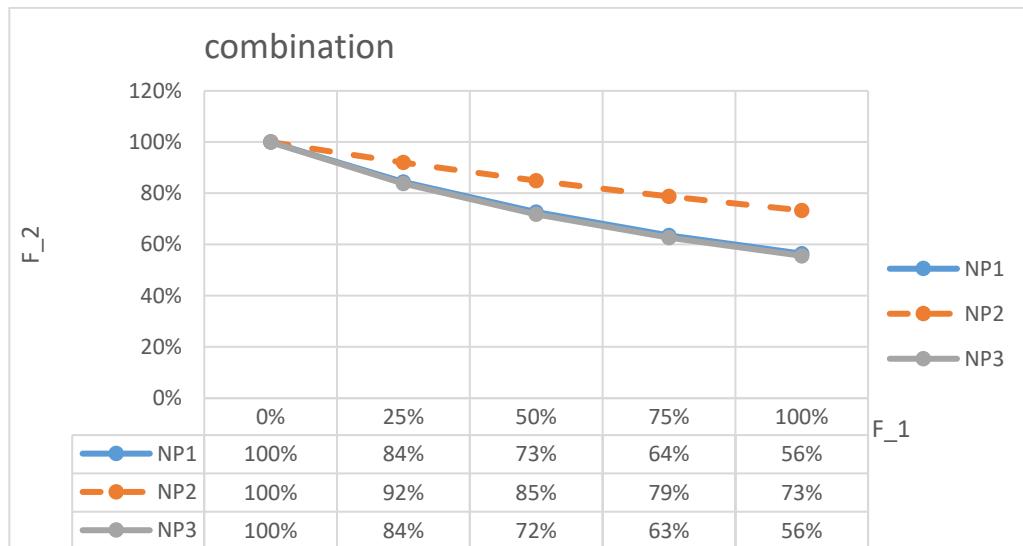

The drilling in the beam should be done on site.

For load combination can be made a simplified check as following:

$$(F_{1,d} / R_{1,d})^2 + (F_{2/3,d} / R_{2/3,d}) \leq 1$$

Or according the following:

It gives the percentage of the capacities in the different combinations.

e.g for NP3 and 75% of the R₁ capacity is given a capacity of ~ 63% for the force direction F_{2/3}.

The anchoring has to be checked in every case.
